

COMPENDIUM OF BASIC ENVIRONMENT AND NATURAL RESOURCES (ENR) STATISTICS FOR OPERATIONS AND MANAGEMENT (Second Edition)

2000 - 2008

DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

FOREWORD

Economic progress, usually based on the exploitation of natural resources, leads to resource depletion, environmental degradation, and pollution. To mitigate these problems and effectively manage our natural resources, it is vital that environmental statistics are made available to policy makers and other users. This Compendium of Basic Environment and Natural Resources Statistics for Operations and Management (2000 - 2008) is a response to this need.

With accurate statistical data on component sectors such as forestry, biodiversity, coastal and marine resources, minerals and lands, this *Compendium* is a useful tool for managing natural resources accounts. It shows us, among others, the extent to which our economy uses natural resources and degrades the environment, while taking into consideration the presence or absence of a particular policy. Such information will definitely facilitate planning for sustainable development.

This Compendium is thus indispensable to the performance of the DENR's mandate as the primary agency tasked with environment and natural resources management.

Assembling the wealth of statistics in this volume took patience and political will, and so we are proud to have reached the stage of completing this volume for dissemination. With this, however, comes the responsibility, which we accept, to periodically update this *Compendium*. Thereby, we can measure the impacts of the policy responses and management measures that we may henceforth adopt.

J.P. PAJE Secretary

ACKNOWLEDGEMENT

This Compendium of Basic ENR Statistics for Operations and Management is the result of team efforts among the DENR Statistical Family as well as the inspiration and encouragement from the DENR leadership, notably Acting Secretary Ramon J.P. Paje.

Gratefully acknowledged is the technical assistance extended by the DENR Bureaus, Attached Agencies, Regional Offices and Central Office: Planning and Policy Service (PPS), Human Resource and Development Service (HRDS), Administrative Service-Personnel Division, National Gender Development Focal Point System, Foreign Assisted and Special Projects (FASPO), Public Affairs Office (PAO) and National Water Resources Board (NWRB).

Finally, congratulations to the Undersecretary for Policy and Planning, Director of Planning and Policy Service, the Chief, Research and Statistics Division (RSD), and Chairperson, Technical Committee on Statistical Concerns and Coordination, the Research and Statistics Division Staff, the members of the Technical Committee on Statistical Concerns and Coordination, and NWRB for giving this worthy undertaking the priority that it deserves. The teamwork that developed in the course of this project will surely serve the institution in more endeavors to come.

Chapter 1 – Environment and Natural Resources

Section A	– Forestry
1	Land Classification as of 2008 1
2	Log Production: 2000 – 2008
3	Lumber Production: 2000 – 2008
4	Plywood Production: 2000 – 2008
5	Veneer Production: 2000 – 2008
6	Summary of Forest-Based Products Exports and Imports: 2003 –
7	Area Reforested by Sector: 2000 – 2008 7
Section B	– Biodiversity
1	Summary of Initial Components of NIPAS by Category as of
1	December 2008 39
2	Summary of Proclaimed PAs by Region per Ecosystem Type as
2	December 2008
3	Summary of Proclaimed Protected Areas with PAMB as December
	2008
4	PACBRMA Issued per Region: CY 2002 – 2008
5	Summary of Income Generated from IPAF per Region as of
	December 2008
6	Reported Caves in the Philippines as of December 2008
7	Number of Critical Wetlands Assessed as of December 2008
8	Number of Ecotourism Sites Identified as of December 2008
9	Issuance of Wildlife Farm Permits and Income Generated (CY 2006 –
	2008)
10	Issuance of Wildlife Collector's Permits and Income Generated (CY
	2006 – 2008)
11	Issuance of Wildlife Gratuitous Permits and Income Generated (CY
	2006 – 2008)
12	Issuance of Wildlife Local Transport Permits and Revenues Generated
	as of December 2008
13	Confiscated Wild Flora and Fauna: CY 2006 – 2008 46
14	Approved Certificate of Wildlife Registration and Revenues
	Generated as of December 2008
15	Issuance of CITES/Non-CITES Permits: CY 2006 – 2008 47
16	CITES/Non-CITES Revenues Generated: CY 2006 – 2008 47
Section C	- Coastal and Marine Resources
1	Status of Philippine Coral Reefs

Figure No.	Title	Page No.
2	Seagrass Distribution in the Philippines	68
3	State of mangrove cover for all mangrove sites in the Philippines	69
Section I	D – Mines and Geosciences	
1	Number of Operating Metallic Mines: CY 2000 – 2008	71
2	Number of Permits/Agreements Approved/Registered: As of 2008	72

INTRODUCTION

This is the second edition of Compendium of Basic Environment and Natural Resources Statistics for Environment and Natural Resources Operations and Management. This compendium is intended to provide our policy and decision makers with the most recent, reliable and relevant statistical data needed in formulating and executing policies and regulations for the sustainable management of natural resources and effective protection of the environment.

The document contains minimum data requirements towards measuring and monitoring the Major Final Outputs (MFOs) of the DENR and in line with the Philippine Statistical Development Plan Framework on ENR. It covers data for the period 2000 to 2008, whenever possible, on forest, biodiversity, coastal and marine, land, mineral resources, environment and water resources. The data set reflects the DENR's priority concerns and thrusts that are most significant to national development.

The publication is divided into three (3) chapters. The first chapter deals with the natural resources and the environment administered and under the regulatory supervision of the DENR. The second chapter focuses on one of the major ecosystem and economic zone of the Philippines under the jurisdiction of the DENR, the Laguna de Bay, while the last chapter is concerned with the workforce of the department with a gender-based perspective.

The chapter dealing with the environment and natural resources contains an introduction about the environmental media covered highlighting its importance, status and interventions being implemented by the concerned bureaus of the DENR, a situational analysis of the major ENR issues and concerns together with the supporting data in the form of statistical tables reflecting the activities and programs of the DENR. The levels of disaggregation vary depending on the availability of data.

The Glossary of Terms, which contains the terminologies and definitions used in the compendium, is included as a supplementary section. Inclusion of the Glossary is a way by which we hope to enhance the usefulness of statistics presented in this compendium.

The publication of this compendium is part of the ongoing efforts of the DENR, particularly, the Research and Statistics Division, to improve ENR statistics. It is also a contribution of the DENR to the development of an orderly Philippine Statistical System capable of providing timely, accurate, relevant and useful data for the government and the public for planning and decision making.

Chapter 1

Environment and Natural Resources

Section A

Forestry

Forest Resources

As of 2008, the Philippines' total land area is 30 million hectares, classified into: forestland and alienable and disposable land (A and D). Forestland covers more than half (53%) of the country's total land area, categorized as follows: established forest reserves (3,270,146 ha); established timberland (10,056,020 ha); national parks GRBS/WA (1,340,997 ha); military and naval reservations (126,130 ha); civil reservations (165,946 ha); fishpond (91,077 ha); and unclassified forestland (755,009 ha) (Figure 1).

Figure 1. Land Classification as of 2008* 30 million hectares

Source: Philippine Forestry Statistics *2008 Preliminary Data (Forest Economics Division)

Forest Cover

Forest cover is measured 7.168 million hectares, equivalent to one fourth of the country's total land area. Such figure was gathered by the Forest Management Bureau (FMB) and National Mapping and Resource Information Authority (NAMRIA) using 2001 to 2003 satellite imageries. Almost 90 percent of the forest cover is located within forestland, while 10 percent is within A and D land. More than 50 percent of the forest cover is classified as open forest; 35.73 percent, closed forest; 4.60 percent, plantation forest; and 3.45 percent, mangrove forest.

Region 4-B has the biggest forest cover of 1,195,144 hectares, and Region 2 is the close second which also has the biggest area on closed (503,149 ha) and open (604,473 ha) forests. Region 3 and 4-B got the biggest area on plantation (58,671 ha) and

mangrove (57,567 ha) forests, respectively. Apparently, NCR has the least with 2,820 hectares.

Watersheds

Watershed is a land area drained by a stream or fixed body of water and its tributaries having a common outlet for surface runoff necessary to support habitat for plants and animals, and they provide drinking water for people and wildlife. It also provides the opportunity for recreation and enjoyment of nature. Watersheds are valuable not only because of its water resources but also because of forest and other natural resources found therein. It is estimated that watershed practically covers at least 70 percent of the country's land area.

There are 422 river basins in the country with watersheds/subwatersheds. As of 2008, a total of 322 watersheds are characterized, 140 of which are critical supporting the National Irrigation System (NIS). Ninety two (92) of the characterized watersheds are within the 140 critical watersheds. Watershed characterization is a regular activity aimed at determining the biophysical, social-economic, cultural, agricultural and political characteristics of various watersheds of the country started in 1989. Region 8 has the most number of characterized watersheds (44), while, Region 2 has the biggest in terms of area (2,035,401 ha).

Likewise, there are 128 proclaimed Watershed Forest Reserves (WFRs) covering an aggregate area of more than 1.5 million hectares as of 2008. Region 3 has the most number (25) with a total area of 280,865.60 hectares, while, the National Capital Region (NCR) has only one - the La Mesa Watershed Forest Reserve in Quezon City proclaimed on 25 July 2007.

Forest Resource Utilization

Forest Tenure

The Department issues several tenurial instruments to manage forestland and these are: Timber License Agreement (TLA) and Integrated Forest Management Agreement (IFMA) for private forest operators, and Community Based Forest Management Agreement (CBFMA), and Socialized Industrialized Forest Management Agreement (SIFMA) for communities. There has been a shift in resource user rights from large scale commercial utilization by timber license agreements to the communities who now operate most of the forest lands. The TLA system is being phased out to convert to a production / co-production – sharing and joint venture modes pursuant to the country's Constitution. Most expiring TLAs have opted to convert to IFMA which is a production-sharing agreement.

From the 15.9 hectares forestland, 57 percent is under tenurial instruments and other management arrangements, while the remaining 43 percent is available for tenure. As of 2008, there are only 6 operating TLAs covering 325,310 hectares of forest lands; 146 IFMAs with an operational area of 767,095 hectares; 1,786 CBFMA covering 1.6 million hectares; 1,803 SIFMA covering 35,587.06 hectares; and 101 tree farm and 42 agroforestry farm lease agreements covering more than 70 thousand hectares.

Majority of the forestland under other management arrangement was issued to indigenous peoples (IPs) through Certificate of Ancestral Domain Titles (CADT) or Certificate of Ancestral Land Titles (CALT). Lately, a new management strategy has evolved which recognizes the crucial role of LGUs and upland dwellers in effecting any meaningful program of intervention - the co-management of forestlands approach by the LGUs and the Department of Environment and Natural Resources (DENR) towards sustainable management. It encourages LGUs and local people to invest in their forestlands and help conserve remaining natural forests.

The issuance of Individual Property Rights (IPR) is a means by which the DENR and the LGUs share stewardship of forests and forestlands with claimants/occupants. The IPR gives each occupant in a co-managed area the right to utilize, develop and manage a maximum of five hectares of land for 25 years, renewable for another 25 years at the option of both parties. The claimant can use the land to farm and harvest the crops he has planted. As steward and manager of the resource, he is bound to help protect and conserve the forest and its resources, and to reforest open and denuded areas. IPRs allow community members to commercially benefit from their upland farms. This motivates farmers to develop bare forestlands and adopt sustainable and environment-friendly farming methods, such as agro-forestry, that minimize forest conversion and slash and burn activities, and wanton timber cutting. They effectively protect the remaining natural forest stands, conserve biodiversity and minimize the release of carbon in the atmosphere. With the support of LGUs, DENR, civil society, and the private sector, IPR holders are encouraged to use their own labor, know how, and available capital to develop their claims, consistent with the co-management agreement and in support of the Forest Land Use Plan (FLUPs) of local government units.

Other Permits and Licenses

Apart from licenses/permits/contracts issued for forest land use and timber production, the Department also issues contracts allowing private individuals/ organizations to gather and transport rattan. As of 2007, there are 34 rattan cutting contracts existing with a total area of 202,994 hectares and with a total of 11,497,747 lineal meters allowed cut. Likewise, there are 55 existing regular sawmills, but only 35 are active, and there are 304 existing mini-sawmills but only 116 are active. Also, there are several plants involved in wood processing/related business producing plywood, veneer, blockboard, particleboard and fiberboard. However, only those involved in veneer, plywood and blockboard production remain active in business.

Production

In nine (9) years, the country produced a total of 6,620,526 cubic meter logs with an average of 735,614 cubic meters per year. Figure 2 revealed that it was in year 2002 when the log production suffered a major slump by as much as 50 percent from 2000, but slowly recover until it reached over 1 million cubic meters in 2006 (157% increase). However, it declined again by 21 percent in 2008. Data are based from timber licensees' reports and different tenurial instruments issued such as Special Cutting Permit (SCP), CBFM/ISF, Private Land Timber Plantation, IFMA, and among others. Around 60 percent of produced logs are from private forest plantations, and 30 percent are from IFMA holders. Noticeably, produced logs from TLA areas are declining as a result of diminishing number of TLA holders. Region 13 is the source of more than 60 percent of logs, and among the 22 timber species, "falcata" and "yemane" are commonly harvested. Majority of the harvested logs are planted trees (79%) and are most often processed into sawlog or veneer log (57%).

Source: Philippine Forestry Statistics, 2000-2008 *2008 Preliminary Data (Forest Economics Division)

In general, lumber showed an uptrend production. From 150,651 cubic meters lumber production in 2000, it increased by as much as 137 percent in 2008 (Figure 3). A total of 2,535,522 cubic meters were produced with an average production of 281,725 cubic meters. Region 13 produced the most with a total of 672,337 cubic meters, equivalent to 26.52 percent share.

Figure 3. Lumber Production 2000-2008* (in cubic meters)

Source: Philippine Forestry Statistics, 2000-2008 *2008 Preliminary Data (Forest Economics Division) Close to 3 million cubic meters of plywood were produced from 2000 to 2008 with an average production of 312,554 cubic meters. Seven (7) regions produced plywood and the bulk (44.38%) comes from Region 13. Plywood production increased from 2000 to 2004 but slowly decreased from 2005 to 2008. From 385,581 cubic meters production in 2004, it decreased by 39 percent in 2008 (Figure 4).

There were 1.8 million cubic meters of veneer produced with an average of 201,362 cubic meters from 2000 to 2008. Veneer production suffered a major downfall in 2005 when it decreased by as much as 65 percent from 2004. Eight (8) regions produced veneer during the period in review and Region 13 produced the most with 62 percent (Figure 5).

Source: Philippine Forestry Statistics, 2000-2008 *2008 Preliminary Data (Forest Economics Division)

Source: Philippine Forestry Statistics, 2000-2008 *2008 Preliminary Data (Forest Economics Division

Apart from timber, non-timber forest products are also produced for domestic and foreign consumption such as almaciga resin, unsplit rattan, split rattan, nipa shingles, anahaw leaves, and bamboo poles, among others.

Trade

Forest products are marketed abroad and a good source of revenue. From 2003-2008, it generated a total of 5.1 billion US dollars, however, it contributed only 2 percent of the country's total exports. Wood-based manufactured articles topped the list of forest-based products exports which got as much as 53 percent. Data shows that the country earns more in wood/forest-based manufactured items than other forest products. Among the four (4) major forest products, plywood and plywood veneered panels is the most marketable as it ranked 5th in the list while lumber and veneer ranked 6th and 9th, respectively. Non-timber forest products ranked 11th. Apparently, a very small quantity (2,819 cu.m) of log is being exported due to the log export ban allowing only plantation logs for export.

In terms of value, the country's exports in six (6) years exceed imports by 431 million US dollars (Figure 6). Paper and paperboard and articles of paper and paper board topped the list of forest-based products imports from 2003 to 2008 with a total value of about 3 billion US dollars. This is followed by lumber (2^{nd}) and pulp and waste paper (3^{rd}) . All four (4) major forest products are in the top 8 of the list meaning that the country is sourcing some of its much needed logs, lumber, veneer and plywood from other countries.

Figure 6. Summary of Forest-Based Products Exports and Imports 2003-2008* (in thousand US \$)

Source: Philippine Forestry Statistics, 2003-2008 *2008 Preliminary Data (Forest Economics Division)

Forest Charges

More than 1.5 billion pesos is the total collected forest charges from harvesting log in nine (9) years with an average of around 167 million pesos. Almost 100 percent of the collected forest charges are from sawlog/veneer log and a very small amount is generated from pulpwood, poles and piles, and fuelwood/charcoal.

There are 14 non-timber forest products harvested from 2000-2008. However, only five (5) generate income out of forest charges and these are: almaciga resin, unsplit/split rattan, bamboo poles, and boho. More than 55 million pesos were collected from harvesting non-timber forest products. Unsplit rattan is the source of 51 million pesos (93%) and followed by almaciga resin with 3.6 million pesos (6.5%).

Forest Disturbance and Forest Conversion

Deforestation occurred at an annual rate of about 316,000 hectares in the 1980s, caused by land conversion, shifting cultivation, forest fires and over-logging. Deforestation decreased somewhat to about 89,000 hectares (1.4%) annually during the 1990s (FAO 2005). Much of the remaining forests are heavily fragmented. The forests of the Philippines are subject to typhoons and other wind damage. Floods have caused widespread damage and large numbers of casualties in recent years. Regular fires occur in many forest areas and that costs around 33 million pesos of damages from 2006 to 2008. About 28,000 hectares were detected as forest areas converted to agriculture, settlements, infrastructures and other purposes.

Reforestation

No clear figures on the total extent of planted forests are available; estimates range from a total of 274,000 hectares to 753,000 hectares (FAO 2005). The official statistics pertain to reforestation conducted by government and non-government groups and are often incomplete to include plantation contributions from the private and other sectors.

Source: Philippine Forestry Statistics, 2000-2008 *2008 Preliminary Data (Forest Economics Division)

However, Philippine Forestry Statistics revealed that more than 200 thousand hectares were reforested in nine (9) years and 43,610 hectares was the biggest recorded reforestation activity which took place in 2008. It exceeded the 2007 record by 57%, and recovered by as much as 337% from 2006 data. Figure 7 showed that reforestation activities declined from 2001 to 2006 but significantly recovered in 2007 and 2008. Region 13 performed the biggest with more than 40 thousand hectares, followed by CAR with 24 thousand hectares.

Government sector is the main actor on reforestation activity that it performs most of the job (74%) composed of DENR and other government agencies. It was only in 2005 that the private sector outperformed the government by 2,000 hectares. Timber licensees (IFMA/SIFMA/CBFMA/TFLA/ PLA/ITPL) and private individuals complying with Presidential Decree 1153¹ are the government's counterpart. Species most commonly used in plantations are Mahogany Gmelina arborea, Acasia mangium, Paraserianthes falcataria and Eucalyptus spp.e

Forestry and Climate Change²

In 2007 the President issued Administrative Order (AO) 171, creating the Presidential Task Force on Climate Change (PTFCC). The Task Force is intended to provide mitigation and adaptation measures to reduce the impacts of climate change from identified sectors including forestry. Last December 2008, the President reorganized the PTFCC with herself as Chairperson and all cabinet secretaries as members. Of concern to DENR, a Task Group on watershed protection was created to undertake a survey and mapping of the protected areas of the country and the needed areas for forest land and these shall be clearly marked on the ground pursuant to the Constitution. Water resources and watersheds shall also be identified and protected and their water flow improved and their floral cover regenerated. There shall also be an inventory of flora and fauna in terrestrial and marine ecosystems principally harnessing the youth in their respective localities. Most of these activities have been initiated but the Task Force provides the political will to complete and provide additional financial resources.

Tropical forests have a valuable role in relation to climate change, being a source and sink of carbon. In the Philippines it is estimated that carbon density ranges widely from less than 5 t/ha to more than 200 t/ha in the following order: old growth forests > secondary forest > mossy forest > mangrove forest > pine forest > tree plantation > agroforestry farm > brushlands > grasslands. Carbon sequestration ranges from less than 1 t/ha/yr in natural forests to more than 15 t/ha/yr in some tree plantations. Land-use change and forestry make an important contribution in the national emissions and sinks. It is estimated that Philippine forest lands are a net sink of greenhouse gasses (GHG) absorbing 107 Mt CO2 equivalent in 1998, about equal to the total Philippine GHG emissions. The clean development mechanism (CDM) presents a clear opportunity for Philippine forestry, if the threats are properly addressed.

¹ PD 1153 was revoked thru an Executive Order No. 287 dated 25 July 1987 issued during the Aquino Administration.

² Excerpt in full from the Third National Report of the Philippines: Status of Sustainable Forest Management Using Criteria and Indicators, March 2009

Climate change mitigation can be accomplished through conservation of existing forest cover and establishment of forest and agro-forestry plantations. Pursuant to this objective, the FMB, as a member of the Inter-Agency Committee on Climate Change and also its Technical Evaluation Committee (TEC), evaluates all proposed Clean Development Mechanism (CDM) projects on afforestation and reforestation which include in and out-sourced financing approaches for forest development. To date, the TEC has conducted scoping on the proposed CDM project of the Laguna Lake Development Authority and the National Power Corporation. At present a project funded by the WB is conducting GHG emission reduction on reforestation and agroforestry in the Laguna de Bay Lake area.

Section **B**

Biodiversity

Protected Areas

Republic Act 7586 otherwise known as National Integrated Protected Areas System (NIPAS) Act of 1992 provides the legal framework for the establishment and management of protected areas in the Philippines. The Law defines protected areas as the identified portions of land and/or water set aside by reason of their unique physical and biological significance, managed to enhance biological diversity and protected against destructive human exploitation.

The NIPAS Act identified 202 initial components comprising of national parks, game refuge and wildlife sanctuaries, nature reserves, wilderness areas, mangrove reserves, watershed reservations, fish sanctuaries, protected landscapes and seascapes, among others, that were proclaimed prior to the effectivity of the NIPAS Act. The identified initial components of NIPAS cover an approximate area of 2.57 million hectares. These areas will be maintained as part of the NIPAS until such time that they are finally assessed as to their suitability for inclusion to the System. (*Figure 1 and Table 1*)

Source: Protected Areas and Wildlife Bureau

As of December 2008, there are one hundred and seven (107) protected areas formally proclaimed by the President under the System covering 3.34 million hectares. Sixty-nine (69) out of the 107 are initial components with an area of 1.89 million hectares and thirty-eight (38) additional areas with an area of 1.45 million hectares. Of the 107 proclaimed protected areas, 29 are marine protected areas with a total area of 1.37 million hectares while 78 are terrestrial protected areas covering an area of 1.97 million hectares. Ten (10) of these areas have been further established under specific laws, namely: Batanes Island Protected Landscape and Seascape in

Batanes; Northern Sierra Madre Natural Park in Isabela; Mt. Kanlaon Natural Park in Negros Occidental & Negros Oriental; Sagay Marine Reserve in Negros Occidental; Central Cebu Protected Landscape in Cebu; Mimbilisan Protected Landscape in Misamis Oriental; Mt. Kitanglad Natural Park in Bukidnon; Mt. Malindang Natural Park in Misamis Occidental; Mt. Apo Natural Park in Davao del Sur; and Mt. Hamiguitan Range Wildlife Sanctuary in Davao Oriental. (*Figure 2 and Tables 2 & 3*)

Source: Protected Areas and Wildlife Bureau

In terms of administration, the NIPAS Act requires the creation of a multisectoral Protected Area Management Board (PAMB) to serve as decision making body for each of the protected area established under the NIPAS. As of December 2008, there are one hundred sixty-six (166) protected areas with organized/appointed Management Boards: 84 PAs with PAMB are proclaimed under the NIPAS (58 PAs are initial components and 26 PAs are additional areas). Out of the 84 proclaimed PAs with PAMB, one is under the management of Palawan Council for Sustainable Development and another under the City Government of Puerto Princesa. (*Figure 3 and Table 4*)

Source: Protected Areas and Wildlife Bureau

Upon the recommendation of the PAMB, the DENR may issue tenurial instrument called the Protected Area Community Based Resource Management Agreement (PACBRMA) to qualified tenured migrant communities and interested indigenous peoples within protected areas over established community-based program areas. Under this instrument, they can manage, develop, utilize, conserve and protect the resources within the multiple use zones of the protected area and buffer zones consistent with the protected area management plan. Since 2002, a total of 56 Peoples Organizations (POs) had been issued with PACBRMA. This involved 3,887 families and 10,897 individuals in sixteen (16) protected areas covering a total area of 21,905.79 ha. (*Figure 4 and Tables 5 & 6*)

Source: Protected Areas and Wildlife Bureau

The NIPAS Act also provides for the establishment of the Integrated Protected Area Fund in each protected area for the purpose of financing projects of the System,

As of December 2008, there are one hundred and forty-four (144)protected areas with Integrated Protected Area Fund (IPAF), of which 90 have active collection and utilization. As of this period, there is total income of PhP 143.4 million and out of which, a total amount of PhP 98.3 million hectares have been utilized by 23 protected areas. (Figure 5 and *Tables* 7 & 8)

Source: Protected Areas and Wildlife Bureau

Caves

Recognizing the need to conserve, protect and manage caves and cave resources, the National Cave and Cave Resources Management and Protection Act (Republic Act 9072) was enacted in 2001. To date, over 1,500 caves have been recorded by the Department of Environment and Natural Resources (DENR) since the start of implementation of the Caves Management and Conservation Program (CMCP) in 1994, with still a significant number of caves yet to be discovered and mapped. These caves are considered unique, natural, and non-renewable resources with important scientific, economic, educational, cultural, historical, and aesthetic values. They are also home to specialized mineral formations with unique and diverse flora and fauna. Four (4) caves were proclaimed under the NIPAS, namely; Peñablanca Protected Landscape (Tuguegarao, Cagayan), Pamitinan Protected Landscape (Rodriguez, Rizal) Calbiga Protected Landscape (Northern Samar) and Banahaw San Cristobal Protected Landscape. (*Figure 6 and Table 9*)

Source: Protected Areas and Wildlife Bureau

Wetlands

Likewise, in recognition of the importance of wetlands that serve as cradles of biological diversity, providing the water and primary productivity upon which countless species of plants and animals depend for survival, and supporting high concentrations of birds, mammals, reptiles, amphibians, fish and invertebrate species and important storehouses of plant genetic material, among others, an assessment of all critical wetlands found in the country is being conducted. As of CY 2008, a total of 170 wetlands have been assessed and identified as critical to biodiversity conservation. Four (4) Philippine wetlands of international importance were recognized under the Ramsar Convention, namely: Tubbataha Reef Natural Park in Palawan, Olango Island Wildlife Sanctuary in Cebu, Naujan Lake National Park in Oriental Mindoro, and, Agusan Marsh Wildlife Sanctuary in Northeastern Mindanao. (*Figure 7 and Table 10*)

Source: Protected Areas and Wildlife Bureau

Ecotourism Sites

Ecotourism or ecological tourism is a form of sustainable tourism within a natural and cultural heritage area where community participation, protection and management of natural resources, culture and indigenous knowledge and practices, environmental education and ethics as well as economic benefits are fostered and pursued for the enrichment of host communities and satisfaction of visitors. A total of 74 ecotourism sites were identified nationwide from 2006-2008. Region 4A has most number of sites potential for ecotourism. (*Figure 8 & Table 11*)

Conservation and Protection of Wildlife Resources

Under the Wildlife Resources Conservation and Protection Act (Republic Act 9147), commercial breeding or propagation of wildlife is allowed provided, that only progenies of wildlife raised, as well as unproductive parent stock shall be utilized for

trade. Likewise, wildlife collection is also allowed provided, however, that appropriate and acceptable collection techniques with least or no detrimental effects to the existing wildlife population and their habitats are used. To avail of this privilege, Wildlife Collector's Permit (WCP) and Wildlife Farm Permit (WFP) have to be acquired by interested parties. Gratuitous Permits (GP) are also issued for the collection of wildlife for scientific researches/studies. From 2006 to 2008, a total of 82 WFPs, 94 WCPs and 82 GPs were issued with a total revenue of PhP601,126.40. (*Figures 9 (WFP), 10 (WCP), 11 (GP) and Table 12*)

Source: Protected Areas and Wildlife Bureau

Moreover, transport of wildlife, by-products or derivatives from legal sources from the point of origin to the final destination within the country is also allowed through the issuance of Local Transport Permit (LTP). Permit to transport can be issued unless the transport is prejudicial to the wildlife and public health. A total of 9,964 LTPs were issued from 2006 to 2008 generating an income of PhP 1.07 M. Almost 50% of the permit was issued by DENR Region XI for the transport of orchids alone. (*Figure 12 and Table 13*)

Source: Protected Areas and Wildlife Bureau

Similarly, the effective implementation of policies and laws governing the protection and conservation of biodiversity resulted to the tremendous decrease in illegal collection and trade of wildlife resources. From 2006-2008, a total of 1,526 heads and 4 pieces of illegally collected and traded fauna and 2,844 pcs, 205 bundles

and 12,084.04 bd. ft. of flora were confiscated in the country by the DENR Wildlife Monitoring Team. (*Figure 13 and Tables 14 & 15*)

Source: Protected Areas and Wildlife Bureau

Furthermore, possession of all threatened and exotic species is prohibited under the Wildlife Act. Exceptions, however, are given to person or entity with financial, technical capability and have the facility to maintain said wildlife. Thus, all threatened indigenous and endemic fauna, and all exotic species in the possession of private individuals or entities without permit from the government agency concerned are required to register their stocks in 2004 thru the issuance of Certificate of Wildlife Registration (CWR). A total of 3,492 CWRs were issued during the period of registration realizing a total revenue of 2.8 million pesos. National Capital Region has generated the biggest income with a total amount of PhP 900 thousand. (*Figure* 14 and Table 16)

The Philippines is one of the signatories to the Convention on International Trade of Endangered Species of Wild Fauna and Flora (CITES), a multilateral environmental agreement which regulates the international trade of plants and animals through a system of permits. The plant and animal species are subject to different degrees of regulation as listed in Appendices I and II of the CITES. The species listed under Appendix I are those threatened with extinction and for which trade must be subjected to strict regulation and may only be authorized in exceptional circumstances. Appendix II, on the other hand, includes species that are not necessarily now threatened with extinction but may become so unless trade on them is strictly regulated. From 2006-2008, PAWB as the CITES Management Authority for terrestrial species issued a total of 8,125 CITES/Non-CITES Permits generating a total revenue of PhP13.6 million. (*Figures 15 & 16 and Table 17*)

Section C

Costal and Marine Resources

The Philippines, being situated at the coral triangle, hosts one of the most biodiverse marine ecosystems among other countries characterized by vast, rich and diverse coastal and marine resources composing of coral reefs, seagrass beds, mangrove and beach forests, fisheries, invertebrates, seaweeds, marine mammals and many others. Its coastline which extends to 36, 289 km is considered as one of the longest coastlines in the world. The coastal zone has served as the lifeblood of communities for centuries and has played a crucial role in the economic, social and cultural development of the country. It provides opportunities for trade, commerce and economic growth which in turns bind the people together through common beliefs, practices and traditions.

Given the Philippines' strategic geography and abundant resources, it is not surprising that 832 of 1541 or 54% of municipalities are in the coastal zone where 62% of the population also lives. Filipinos depend a great deal on coastal resources for food, livelihood and other needs. More than 50% of animal protein intake in the Philippines Healthy coral reefs along with the seagrass beds is derived from marine fishes. support the valuable multi-species fisheries in the country. Mangrove areas provide a wide range of benefits including clean water, food, medicines, and shoreline protection. However, despite all the direct and indirect importance of these coastal habitats to humans, coastal resources are severely being degraded (DENR, et. al., 2001). The government through the Protected Areas, Wildlife and Coastal Zone Management of the DENR is scrambling for solutions to help solve the impending problem on coastal and marine degradation. Because of these threats posed to coastal environment in the country, finding ways to achieve food security, sustainable development, alleviate poverty and reduce vulnerability to natural hazards has been a major challenge faced by the country. To respond to this challenge, wide range of action plans have drafted for the coastal and marine environment over the past few years, both at the national and local level. These actions plans were prepared with the support and assistance of donor agencies such as UNDP, USAID, international financial institutions such as the World Bank and ADB, and international NGOs such as World Wildlife Fund and Conservation International – Philippines.

To be able to appreciate and understand the status of the coastal resources in the Philippines, its extent/condition is highlighted in the following indicated by various authors:

Coastal and Marine Resources of the Philippines: Latest Status and Trends

A. Coral Reefs

- Considered to be one of the highly threatened reef areas in the world
- 468 species scleractinian corals (DA-BFAR-NFRDI-PAWB, 2005; Fishbase 2008)
- 50+ species soft coral
- 25,000 km² estimated cover, with most diverse and most extensive in the southern and central parts of the country (Spalding, 2001).
- 70% in poor/fair condition; less than 5% in good condition (Licuanan & Gomez 2000) *Figure 1*.
- Philippine reefs may be in a steady state of decline (from 5% to 3% to >1%) although better reefs can still be found in Celebes Sea, Southern Philippine Sea, Sulu Sea and the Visayas Biogeographic regions (Nanola, *et al*, 2004).
- Coral reefs contribute from 8-20% to about 70% for some island reefs to the total fishery production (Aliño, *et al*, 2004).
- About 62% of the population living along coastal areas are directly dependent on reefs for their livelihood (Barut *et al*, 2004).

Figure 1. Status of Philippine Coral Reefs (*Licuanan & Gomez.* 2000)

B. Seagrasses

- Philippines has the second highest seagrass diversity in the world, second only to Australia
- 19 out 60 species in the world (4NR on CBD, 2009) but not all species are found at any single site
- 27,282 km² cover (Fortes, 2008 as cited in 4NR on CBD, 2009) *Figure 2*
- In the last 50 years, about 30-40% of seagrass areas in the Philippines have been lost (Fortes, 2008).

Figure 2. Seagrass Distribution in the Philippines (Fortes, et al, 2008)

C. Mangroves

• Separate estimates showed the following data on the coverage of Philippine forested mangrove area:

 Table 1. Estimates of mangrove forest in the Philippines (1918-2009)

Year	Estimated Area (ha.)	Sources
1918	450,000	Brown and Fischer, 1920
1950	375,020	Aerial photographs (unpublished data)
1970	288,000	DENR, et al, 2001b as cited in BFAR-NFRDI-PAWB, 2005
1972	227,947	LANDSAT
1988	149,400	SPOT
1993	138,000	DENR 1998; as cited in BFAR-NFRDI-PAWB, 2005
1995	120,000	DENR 1998; as cited in BFAR-NFRDI-PAWB, 2005
2003	249,540	Based on Satellite imagery interpreted by NAMRIA/FMB

Figure 3. State of mangrove cover for all mangrove sites in the Philippines

Based on the foregoing data, there has been a significant decrease in mangrove forest cover from 450,000 ha in 1918 to about 120,000 ha in 1995 and if post-1980 trend continues, it is expected that there will be less than 100,000 ha by the year 2030 (4NR-CBD, 2009 citing PEM, 2005; White and de Leon, 2004). This significant decline was mainly due to the conversion of mangrove forests to fishponds wherein the Bureau of Fisheries and Aquatic Resources (BFAR) issued Fishpond Lease Agreements (FLAs) in all regions nationwide. A total of 62,834.34 ha of mangrove forest area were

issued with FLAs during the period of 1973 to September 2002 (NAMRIA).

Realizing the considerable loss and the damage that will be brought by the decline of mangrove forest area to the ecosystem and to the community, mangrove replanting/rehabilitation programs have thus been popular, from community initiatives (1930s to 1950s) to government sponsored projects (1970s) to large scale international development assistance programs (1980s to present) (Primavera, 2008). The data reflecting the total cover of mangrove forest area after 2003 onwards are yet to be validated on the ground

Other Marine Resources/Indicator species for status of Coastal and Marine Resources

- 5 species of Marine turtles. *Marine turtle nesting sites on beaches have been reduced in area.* (Alcala, 2009)
- 1755 reef-associated fishes species (Fishbase 2008, BFAR-NFRDI-PAWB, 2005)
- 168 species or 10% of cartilaginous fishes in the world
- 820 species of algae (Fishbase 2008, BFAR-NFRDI-PAWB, 2005)
- 648 species of mollusks
- 1062 of seaweeds including sea algae
- 25 species of marine mammals

Section D

Mines and Geosciences

Mineral Resources

The Philippines is one of the world's richly endowed countries in terms of mineral resources. According to the Mines and Geosciences Bureau, thirty percent or 9 million hectares of the total land area of the Philippines was identified to be potential sites for mineral deposits. As of 2006, the total metallic mineral resources of the Philippines was estimated at 10.9 billion tons, while the non-metallic mineral resources was estimated at 48.5 billion metric tons and 20.8 billion cubic meters for marbleized limestone and aggregates (Table 1).

According to the Mines and Geosciences Bureau, mineral resources are the lifeblood of any mining operation and their ultimate development spell the success of any mining operation. Technically, however, declared mineral reserves should not be taken as the total mineable reserves because only a few of these are recoverable under a particular mining design and set of operating parameters.

Operating Metalllic Mines

For the years reviewed, 2000-2008, the number of companies engaged in metallic mining was noted highest in 2007. These totaled to 25, nickel and gold operating mines number the most eleven (11) or 44% of the total for nickel and seven (7) or 28% of the total for gold. The production main stream was composed of eleven (11) nickel mines, seven (7) primary gold with silver by product, two (2) copper mines with gold, silver and

by-product. zinc two (2)chromite mines, a processing plant, and a polymetallic mine. According to the Mineral Production Review, Mines and Geosciences Bureau, this positive outlook enjoyed by the metallic mining sector was due to the overwhelming increase in the world metal prices of gold, silver, copper and nickel which began in 2006. Mineral analyst attribute this dramatic change in the world metal prices to the demand for metal and base metal of the growing economies in Asia, particularly in industrialized China vis-àvis the world supply's inability to cope with current demand. Figure 1.

Source: Mineral Economics, Information & Publication Division (MEIPD), Mines & Geosciences Bureau (MGB)

Table 2 shows that while the total number of operating metallic mines at an increasing trend, noted that the biggest increased was in 2007 by 38.89% from 18 in 2006 to 25 in 2007. The increase resulted from an expansion of the number of operating nickel mines from five (5) to eleven (11) and the addition of a new operating copper mines with gold, silver & zinc. This is due to the favorable prices of these metals in the world market. The average world price of nickel increased by 54.78% from \$10.88/lb in 2006 to \$16.84/lb in 2007 (Mineral Industry Statistics as of 15 January 2010, Mines and Geosciences Bureau).

Approved/Registered Mining Permits/Agreements

As of 2008, total number of approved/registered mining permits/agreements posted an 8.13% increase from last year's 504. This was affected by the consistent efforts of the Bureau of Mines and Geosciences to revitalize the mining industry. The continued simplification of procedures in the processing and the cleansing of idle mining applications have contributed to the overall positive performance of the sector. These numbers of .approved/registered mining permits/agreements resulted in the additional investment of some Php 600 M for the next two to three years.

Figure 2. Number of Permits/Agreements Approved/Registered As of 2008

Source: Mineral Economics, Information & Publication Division (MEIPD), Mines & Geosciences Bureau

Table 3.shows the total number of permits/agreements approved/registered from 2001 to 2008. The increased was highest in 2007 by 16.94% or seventy-three (73) permits/agreements more, from 431 in 2006 to 504 in 2007. Correspondingly the number of Mineral Production Sharing Agreements (MPSA) rose in 2007 by 27 from 209 in 2006, Exploration Permits (EP) by 10 from 33, Industrial Permits (IP) by 24 from 161 and Mineral Processing Permits (MPP) by 35 from 2006 (Mineral Industry Statistics as of 15 January 2010, Mines and Geosciences Bureau).

Mineral Production

Since metal demand depends largely on the industrialization of the local and international economies, for the years reviewed 2000-2005, it was observed that the overall performance of the gross production value of large scale metallic mining and small scale gold mining grew in a lackluster pace as the economies of the world suffered from the global financial crises.

The years 2006-2008 painted a different picture, however, as the prices of metals in the world market made a jumpstart due to demand for metals by growing economies began to increase. Noted that for the same years the gross production value of nonmetallic mining exhibited steady gains as the construction industry created a high market demand for sand, gravel and cement raw materials (Mineral Production Review and Mineral Industry Statistics) (Figure 3).

Source: Mineral Economics, Information & Publication Division (MEIPD), Mines & Geosciences Bureau (MGB)

Table 4. shows gross production value in mining of large-scale metallic mining, small-scale gold mining and non-metallic mining, CY 2001-2008. The biggest increase posted by the gross production value in mining was in 2007 by 40.96% or 29.7 billion pesos from 72.5 billion pesos in 2006. The overall increase in the gross production value in mining is seen as the result of the revitalization of the industry and the increasing trend of the metal prices in the world market.

For 2007, gross production value of the large-scale metallic mining of 49.2 billion pesos accounted for 48.14% of the total 102.2 billion pesos. Small-scale gold mining gross production value posted 32.2 billion pesos which accounted for 31.51% of the total. The gross production value of non-metallic mining contributed 20.35% of the total or 20.8 billion pesos.

Benefits from the Mining Industry

Figure 4 shows the trend of the industry's contribution to the local and national government by way of employment and taxes, fees and royalties. During the years in review, employment in mining and quarrying sector was on an increasing trend at an average rate of 4.83% per year. The highest employment recorded was noted during 2008 at 158 Thousand. However, employment in 2006 posted the highest percent increase of 14.63% from the 123,000 employed in 2005 to 141,000 in 2006. The highest taxes, fees and royalties collected by the industry during the nine year period was recorded in 2007 amounting to Php 10.4 M, 12.50% increase from the Php 6.4 M collected in 2006. Noted that in 2007, the gross production value also posted its highest level for the years reviewed.

Figure 4 . Employment and Taxes, Fees & Royalties from Mining CY 2000 -2008

Source: Mineral Economics, Information & Publication Division (MEIPD), Mines & Geosciences Bureau (MGB)

Geohazard

Geohazard assessment and mapping aims to generate information on the vulnerability of certain areas to various types of geologic and natural hazards and make this basic information available to authorities responsible for physical framework and land use planning, land use classification and allocation (by LGUs), project development and disaster preparedness, management and mitigation.

Table 5 is the summary of the number of municipalities/cities assessed and mapped for geohazard vulnerability from pre CY2005 to CY2008, while Table 5.a. shows the provinces and number of municipalities/cities assessed and mapped for geohazard vulnerability, for CY 2006 to 2008 from the Mines and Geosciences Bureau.

2006 posted the most number of municipalities/cities assessed and mapped for geohazard vulnerability, 486 regionwide and 13.99% or 68 of these were in Region 8. Included were the municipalities/cities in the provinces of Biliran, Eastern Samar, Leyte, Northern Samar, Samar and Southern Leyte. While Regions 8 and 12 posted the least, with 13 municipalities/cities each, assessed and mapped for geohazard vulnerability. In Region 6, included were the municipalities/cities in the provinces Capiz & Iloilo and Saranggani, South Cotabato and Sultan Kudarat for Region 12.

In 2008, the central office of the Bureau conducted their own assessment and mapping activities for geohazard vulnerability in eight provinces nationwide. Included were the province of Laguna, Batangas, Zamboanga del Sur, Antique Province, Zambales, Bulacan, Cagayan and Isabela. This were done in a total of seventy-four (74) municipalities/cities and they accounts for 29.36% of the total 252 municipalities/cities assessed and mapped for geohazard vulnerability for 2008.

Cited in the Accomplishment Report for CY 2008 of the Bureau, a total of 252 municipalities covering 4,585 barangays were assessed for susceptibility to landslides as well as flooding/flashflooding. Advisories and appropriate warnings were given to each barangays assessed by the MGB technical personnel Central and Regional Office. Areas covered during the period resulted in the completion of the mapping in the provinces of Cagayan Valley, Isabela, Zambales, Laguna, Antique and Zamboanga del Sur. Thirty (30) 1:10,000 scale geohazard maps have been prepared, six of which include the quadrangles covering Cavite province.

Detailed (1:10,000 scale) landslide geohazard mapping were conducted in Rizal Province covering three (3) quadrangles: Montalban, San Mateo and San Rafael.

Results of recently completed geohazard assessment and mapping of priority municipalities were presented in a province-wide seminar/workshop on Communitybased Hazard Mapping and Disaster Preparedness in Bohol, Cavite, Aurora, Pampanga, Ilocos Norte and Laguna. These seminar/workshop were participated by Barangay officials, representatives from municipalities/cities and teachers/ educators with the province concerned. Geohazard IEC materials such as maps, posters, VCD's, pamphlets were disseminated to concerned LGUs. Advisories/appropriate warnings were given to each barangay assessed. Advisory letters were also given to barangay officials informing them of the geohazards in their areas together with landslide awareness posters and flyers on floods.

The bureau have assessed at least 170 relocation sites identified in the region and some were recommended favorable for relocation sites. Among the observations during the assessment are sites considered suitable for housing development and sites excluded from development due to steep slopes.

Detailed landside hazard zonation identified sites that are most prone to landslides. Warning signages were installed in these sites to warn the populace of such events.

The MGB provides resource persons to the National Disaster Coordination Council to provide technical information on geological hazards. Thru the READY project, the bureau provides assistance to the Council in terms of technical assistance and when needed by sending a team to evaluate geohazards in affected areas.

Mine Waste and Mill Tailings

The mining operation generates mine waste and mill tailings in recovering the desired minerals from the ores. During the period 2000-2008 about 21M MT of mine waste and 99M MT of mill tailings were disposed in mine waste dumps and tailing ponds, respectively amounting to 10.2 million pesos. These were generated various from operating mines and quarries in the country (Table 6).

According to the Mining Environment & Safety Division (MESD), of the Mines & Geosciences Bureau (MGB) the contingent liability mechanism for damages resulting from mill tailings and mine waste dumps is provided for in Republic Act No. 7942, also known as the Mining Act of 1995, and is incorporated in the Contingent Liability and Rehabilitation Fund (CLRF). It imposes Mine Waste and Tailings Fees (MWTF) on operating mining companies in the Philippines in the amount of P0.05/MT for mine waste and P0.10/MT for mill tailings. The amount collected accrues to a Reserve Funds utilized to compensate for the pollution related damages caused by mining. The penalty of P50.00/MT for the unauthorized release of tailings is also imposed. However, engineered and well maintained mine waste and mill tailings disposal systems and volumes of mine waste and mill tailings utilized for mine related infrastructures or projects are exempted from payments of fees.

Compensable damages under the Mining Act refer to those damages cause by mine waste and mill tailings on lives and personal safety, lands, agricultural crops and forest products, marine life and aquatic resources, cultural and human resources; and infrastructures and the revegetation and rehabilitation of silted farm land and other areas devoted to agriculture and fishing.

Section E

Lands

Our land resources are finite. Based on the land classification data of NAMRIA, we have a total land area of about 30 million hectares. However, only 47 percent or 14.1 million hectares of this area can be alienated, disposed or be subjected to settlements, production and other purposes. Out of the 14.1 million hectares of A & D lands, 9.63 million hectares have been titled; from the remaining untitled, around 1.8 million hectares are non-agricultural lands that include road networks and open spaces and 1.7 million hectares are targeted for disposition in the next four years (Figure I, Table I).

The survey, management and disposition of Alienable and Disposable (A & D) lands and other government lands not placed under the jurisdiction of other government agencies is the responsibility of the Lands Management Bureau (LMB).

Source: 2008 Accomplishment Report, PDED-PPSO

Land Surveys

As of December 31, 2007, out of 1,619 municipalities and cities in the country, 913 cities/municipalities or 56.10 percent were the approved cadastral surveys, 340 cities/municipalities or 20.90 percent were work in progress, 291 cities/municipalities or 17.88 percent were partially surveyed, 75 municipalities or 4.60 percent were unsurveyed and the remaining 8 or 0.50 percent were still uncategorized. (See Figure 2, Table 2). In 2007 the total no. of municipalities/cities have change in number of approved cadastral survey from 916 to 913 and Office Verification/In Progress municipalities./cities from 336 to 340 due to discrepancies on reports from regional offices. Change in total number of municipalities/cities from 1,617 to 1618 CY 2004-2006 is due to the newly created municipality of Lumbaca-Unayan carved out from the municipalities of Bayang Landing and Lumbatan both in the Province of Lanao del Sur. Change in total number of municipalities from 1,618 to 1,627 is attributed to the creation of 9 municipalities of ARMM, wherein the DENR-LMB ARMM Director did not categorized 8 out of 9 whether it is AS/PS/IP/US.

The DENR's Issuance of Administrative Order No. 2001-23 dated August 29, 2001 returned to the DENR, through the Lands Management Bureau the devolved survey functions which is expected to hasten the completion of the cadastral survey of the entire country that remained stagnant for almost 10 years.

Source: Technical Bulletin No. 7, Geodetic Survey Division, LMB

Pursuant to Executive Order (EO) No. 45 dated January 5, 1993 and amended by EO 321 dated July 2, 2004, which prescribes the adoption of the Philippine Reference System (PRS) of '92 as the standard reference systems of survey in the Philippines, a total number of 945 reference points for the 3rd and 4th orders were already established as of December 2008. This brings the total reference points established to 16,045 or 12.74 percent of the total target of 125,859 reference points which are programmed to be established all over the country up to 2012 (Figure 3).

At the regional front, Regions 7 and 13 (Caraga) registered the highest number of reference points established with 114 each as of December 2008. Region 9 followed with 106 and Regions 2 and 3 with 100 each. Region 1 registered the lowest established

reference points with only 9 (Table 3).

Source: Accomplishment Report, PDED-PPSO

In relation to amended E.O. # 321 dated July 2, 2004 which mandates the adoption of PRS '92 as the standard system for all surveys in the country, the National Mapping and Resource Information Authority (NAMRIA) established 162 Geodetic Control Points for the 1^{st} and 2^{nd} Orders under the Philippine Geodetic Network for CY 2007 with a total no. of 5,236 Geodetic Control Points established or 127 percent of the total target of 4,117 Geodetic Control Points to be established up to 2010. (Figure 4, Table 4)

Source: Accomplishment Report, PDED-PPSO

Foreshore areas are part of the shore, which is alternately covered and uncovered by the ebb and flow of the tide. The improper management of foreshore areas has contributed to the economy's financial crisis due to loss in income caused by noncollection of rental fees from lease of public lands, foreshore lands and other valuation of lands subject to disposition and lease agreement.

To properly manage and increase revenue collection, the government gave priority activities on the issuance of lease contracts or provisional permits to those occupants of foreshore areas. As shown in Figure 5, there were 1,047 contract/permits issued for the use/occupation and management of foreshore areas nationwide with 120 percent accomplishment of the target for the year. On a regional basis, Region 5 had the most number of contract/permits issued with 202 followed by Region 1 with 189, While Regions 11 and 9 had the least number of contract/permits issued with 9 and 6, respectively. (Table 5)

On the other hand, the Foreshore Areas inventoried from 2000 to 2006 totaled, 15,307 hectares averaging at 2,187 hectares per year. For 2006, a total of 74 hectares of foreshore area was inventoried by Region 6 and Region 7 with 47 and 27 of foreshore areas inventoried respectively. In calendar year 2007, only Region 5 reported foreshore areas with six (6) coastal municipalities in the Bicol Region were inventoried. (Table 5.1)

With regards to patrimonial properties (residential, commercial, and industrial) owned by the government in its private capacity and disposed through lease/sale to actual occupants and qualified beneficiaries had been managed. From 2006 to 2008 a total of 898 number of deeds/lease contracts processed/issued (Table 6). Ascending trend can be observed in the period covered. In 2008, a total of 373 number of deeds/lease contracts issued. Region 3 had the most number of deed/lease issued with 150, followed by Region 7 with 83 and Regions 12 and 9 had the least number of deeds/lease contract issued with 2 and 1, respectively.

Land Disposition

In an effort to fast track the issuance/approval of land patents/titles, the DENR formally issued Administrative Order (DAO) No. 2002-20 which restored the signing authority from the DENR Secretary to the Regional Executive Directors (RED). As a result of this, patents issued for Public Agricultural Lands significantly accelerated from 2,137 in 2001 to 81,936 in 2002 or a 3,734 percent increase. From 2002 to 2008, patent issuances posted an annual average increase of 10.61 percent (Table 7). For 2008, Region 8 issued the highest number of patents with 11,297 while Region 6 issued the least numbers with 4,074 patents. In addition a total of 8,580 patents covering 2,975.72 hectares were issued under the Land Administration and Management Project (LAMP) in CY 2008. (Table 7.1)

With the issuance of DAO No. 2003-15 which reaffirmed the authority for the REDs and Provincial Environment and Natural Resources Officers to approve titles for residential, commercial and industrial lands, 3,977 lots were issued titles in 2008 compared to 3,282 issuances in 2007. Region 3 issued 1,000 titles in 2008 while only 43 were issued in Region 5 during the same period. (Table 7.2)

The Issuance of special patents for School Sites is another priority program of President Gloria Macapagal Arroyo. Prior to the issuance of special patents, a Presidential Proclamation is required and the preliminary activities such as investigation, sketches or plan of the area of location, certifications and clearances from other government agencies and preparation of draft proclamation are done in the regional level. The identification of School Sites is a Regional Offices activity undertaken by the Land Management Division. For CY 2008, the Regional Offices identified and processed two hundred twenty one (221) applications for school sites with 118 percent accomplishment for CY 2007 with 187. A draft proclamation for each lot was prepared for endorsement to the Land Management Bureau (LMB), who will review the validity prior to the proclamation and issuance of Special Patent. (Table 8)

One of the ten-point agenda of the Arroyo Government is to provide socialized housing. In calendar year 2007 the regional offices was given a target to identify at least three sites. The Land Management Division in the regional offices identified three sites and prepared draft proclamation for each site and endorsed to the Land Management Bureau. For CY 2008 there were 59 sites identified for socialized housing nationwide, with 107 percent accomplishment of the target for the year. (Table 9)

The disposition of land cases is performed by the bureau to resolve land cases involving rights conflicts of public land applicants. From 2000 to 2007, a total of 5,382 claims and conflicts were investigated. In 2007, 86 land claims and conflict cases investigated, with 866 cases resolved/decided in calendar year 2008. (Table 10) A descending trend can be observed in the cases investigated in the period covered. CAR had the most number of cases investigated with 661 followed by Region 1 with 646.

In terms of the number of cases resolved, a total of 4,870 cases were resolved from 2000 to 2008. Most of these resolved cases were in region 3 with 120 followed by Region 13 (Caraga) with 80. On the other hand, the region with the least number of land cases resolved was Region 4-B with 23 cases.

The DENR likewise launched the Oplan Fake Titles Project with the issuance of Special Order No. 2002 – 308 dated April 19, 2002 to stop or minimize the rising incidence of land frauds and land titling anomalies in the country. Preventive action is undertaken by keeping people informed on how to detect fake titles. It created a Special committee to look into fake titling. With this, the Bureau investigated a total of 5,503 cases from 2000 to 2007 with Region 7 reporting 1,329 cases and Region 10 with 33 cases. In 2000, there were 2,177 cases of fake titles investigated while only 5 cases were investigated in 2007. A decreasing trend of cases on fake titles were filed in the Office of the Solicitor General (OSG) from 2000 to 2007. In 2000, the number of cases filed in the OSG posted a total of 1,656 while 14 were posted in 2007. Most of these cases were reported in Region 7 with 627 while only 1 case was reported in Region 12 (Table 11).

Section F

Environment

Air Quality

Air pollution is consistently a perennial major problem that insinuates itself unnoticed in our daily lives. The worsening air quality condition is more evidently felt particularly in Metro Manila and other urban centers.

In an effort to monitor and improve the quality of air, the Environmental Management Bureau (EMB) - National Capital Region (NCR) regularly monitors roadside Total Suspended Particulates (TSP) concentrations through its sampling stations in Metro Manila, while EMB regional offices monitors the same on a nationwide scale. In addition to this, monitoring of ambient concentrations of air pollutants other than TSP is conducted only in Metro Manila and in the cities of Cebu, Cagayan de Oro, Davao, and Iloilo Baguio because of the high cost it entails in putting up the automatic/telemetry monitoring equipment and maintaining its operations (EMB Accomplishment Report CY 2008).

Total Suspended Particulates (TSP) is one of the criteria pollutants for which National Ambient Air Quality Guideline Values have been established for the protection of public health, safety and general welfare. TSP are small solid and liquid particulates suspended in the air include primarily dust, smoke, metallic and mineral particulates, soot, mist, and acid fumes. These airborne particulates are usually produced by motor vehicles and fuel burning facilities (2002 National Air Quality Status Report). The national guideline values for TSP are 230 *ug*/NCM maximum for a 24-hour exposure and 90 *ug*/Ncm maximum for a one-year exposure. The two-tiered guidelines are premised on the assumption that one can tolerate higher levels of exposure to an air pollutant if the exposure is for a shorter period only (National Air Quality Report 2003-2004).

Based on the assessment results gathered from the ten (10) monitoring stations in Metro Manila, the air quality has improved with a reduction of 14.81 percent in Total Suspended Particulates (TSP) level, from an annual geometric mean of 162 *ug*/Ncm in CY 2003 to 138 *ug*/Ncm in CY 2008 (Figure 1, Table 1a). This reduction was reflected in 8 stations namely: Edsa-NPO, Edsa-East Avenue, Valenzuela, Pasig, Makati, Mandaluyong, Manila and Ateneo. Of the 10 stations, Edsa-East Avenue recorded the highest reduction of 40.22 percent.

Figure 1a - Annual Geometric Mean of Roadside Total Suspended Particulates (TSP) Levels in EDSA-NPO Station: 2000-2008 TSP Concentration (ug/Ncrr 90 u g/Ncm - guideline value

Source: EMB Accomplishment Reports

Figure 1j - Annual Geometric Mean of Roadside Total Suspended Particulates (TSP) Levels in EDSA-

Source: EMB Accomplishment Reports

However, despite the said reduction, the long-term guideline value of 90 ug/Ncm for TSP was exceeded in almost all monitoring stations indicating generally fair (ranges from 81-230 ug/Ncm) to unhealthy (ranges from 231-349 ug/Ncm) air quality conditions. Only Ateneo and Pasig stations with 74 ug/Ncm and 85 ug/Ncm (Figure 1c and 1f) respectively were recorded with TSP level within the 90 ug/Ncm TSP guideline value in CY 2008. On the other hand, the EDSA MRT station showed with the highest TSP concentration of 282 ug/Ncm for the same period (Figure 1j). This scenario can be attributed to the fact that the station is near major road intersection and large motor vehicles and pedestrians densities further aggravate the problem of air pollution in the vicinity of the station.

From the 24 sampling stations monitored located in major urban centers outside Metro Manila, 19 stations showed improvements in TSP levels in CY 2003 and CY 2008. The highest reduction recorded among the stations monitored with TSP level within the guideline value was in Alangilang, Batangas with 50 ug/Ncm in CY 2008 from 127 ug/Ncm in CY 2003. Moreover, in 2008 a notable observation was that sixteen (16) monitoring stations (Tuguegarao City; Batangas; Quezon; Legazpi City; Iriga City; Panganiban Drive, Naga City; Jaro Iloilo; CITCOM, Cebu City; Panacan, Davao City; Purok Amparo Subdv., Davao City; TESDA Compound, Davao City; Barangay Bunawan, Davao City; Tupi Municipal Hall, S. Cotabato City; Cotabato City; Midsayap, Cotabato City; and New Asia, Butuan City) were reported with levels lower than the required standard. Meanwhile the Intercity Industrial Subdv. Wakas in San Fernando, Pampanga monitoring station reflected the highest TSP level in CY 2008 with 254 ug/Ncm (Table 1b).

The data on TSP levels has to be viewed as an indication of the pollution level at the vicinity where the monitoring stations are located and not as representative of the TSP concentration of the city or province where the stations are located. Stations, which recorded very high TSP levels, are in general, located on the roadsides. Roadside TSP includes vehicle exhaust and resuspended dust.

Water Quality

The country's water resources are persistently approaching its critical condition if not to be managed effectively and efficiently. In line with the importance of clean water to our economy and to public health, the management has been strengthening its policies and programs toward clean and safe water.

As a way of maintaining the safety and satisfactory condition of the water resources, classification of water bodies are being undertaken by the DENR based on the criteria provided in DAO 34, series of 1990 - Revised Water Usage and Classification/Water Quality Criteria.

Classification/reclassification of Philippine waters is the categorization of all water bodies to maintain its safe quality and satisfactory condition according to their best usages. Most beneficial existing and future use of said bodies of water and lands bordering them includes residential, agricultural, aquacultural, commercial, industrial, navigational, recreational, wildlife conservation and aesthetics purposes.

As of CY 2008, there were 623 water bodies classified by EMB. These included the 283 principal rivers (67.22% of the total 421 principal rivers nationwide) and 340 lakes/small rivers/bays.

In the Philippines, these water bodies under fresh surface waters (i.e. rivers, lakes, reservoir, etc.) are classified into five (5) types based on its best usage:

- 1) Class AA or waters which require only approved disinfection in order to meet the Philippine National Standards for Drinking Water (PNSDW);
- 2) Class A or waters which require complete treatment (coagulation, sedimentation, filtration and disinfection) in order to meet the PNSDW;
- 3) Class B or waters that can be used for primary recreation such as bathing and swimming, skin diving, etc.
- 4) Class C or fishery water for propagation and growth of fish and other aquatic resources;
- 5) Class D category as being allowed for agriculture, irrigation, livestock watering and cooling in industrial facilities.

For the classified coastal and marine waters group (i.e. coastal, offshore and estuarine):

- Class SA or waters suitable for propagation, survival and harvesting of shellfish for commercial purposes and designated as marine parks and reserves;
- 2) Class SB or waters suitable for bathing, swimming and skin diving;
- 3) Class SC described as Recreational Water Class II suited for boating and commercial sustenance fishing; and
- 4) Class SD waters rated as Industrial Water Supply Class II for cooling purposes in industrial facilities

Among the nine (9) classifications, two (2) were ranked with the most number of classification. Out of the 623 classified water bodies, 35.6% belongs to Class C and 32.9% Class A. Moreover, on a regional basis, Region 6 was recorded to exhibit the highest number of 58 classified water bodies followed by Regions 3 and 5 both with 56 each and Region 4-B with 50 (Figure 2, Table 2b).

Figure 2 - Number of Classified Water Bodies (Including Principal and Small Rivers): CY 2007

Assessment of Water Quality

The Biochemical Oxygen Demand (BOD) and Dissolved Oxygen (DO) are among those parameters being used in assessing water quality. Biochemical Oxygen Demand is a measure of the amount of oxygen used by microorganisms to decompose organic waste. BOD criteria standard is 5.0 mg/L (maximum) for Class 'A' and 'B', 7.0 mg/L (maximum) for Class 'C' and 10.0 mg/L (maximum) for Class 'D'. On the other hand, Dissolved Oxygen is an indicator of how well the water can support aquatic life. DO criteria standard is 5.0 mg/L (minimum) for Class 'AA to C' and 3.0 mg/L (minimum) for Class D. Regular water quality monitoring is mainly focused on the identified nineteen (19) priority rivers under the Sagip Ilog Program. The 19 priority rivers in the country are the following: 1) Balili River, Baguio; 2) Meycauyan River, Bulacan; 3) Marilao River, Bulacan; 4) Bocaue River, Bulacan; 5) Imus River, Cavite; 6) Ylang-Ylang River, Cavite; 7) Mogpog River, Marinduque; 8) Calapan River, Oriental Mindoro; 9) Anayan River, Camarines Sur; 10) Panique River, Masbate; 11) Malaguit River, Camarines Norte; 12) Iloilo River, Iloilo; 13) Luyang River, Cebu; 14) Sapangdaku River, Cebu; 15) Cagayan de Oro River, Cagayan de Oro; 16) Pasig River; 17) Paranaque River; 18) Marikina River; and 19) San Juan River.

Results of assessment revealed that all 19 priority rivers have improved significantly from CY 2003 - 2008 in terms of DO level. Of which, the Cagayan de Oro River classified as Class 'A' consistently passed the DO criteria standard (Table 3b-3d). It was also noted that for the period CY 2006-2008, six (6) rivers which include Anayan River; Malaguit River, Panique River; Luyang River; Sapangdaku River; and Cagayan de Oro River have sustained the acceptable DO level (Table 3d).

On the other hand, two (2) rivers, San Juan River and Meycauyan River maintained to exhibit high BOD level exceeding the standard from CY 2003 - 2008 (Table 3b-d). While for the period CY 2006-2008, seven (7) rivers namely Calapan River; Anayan River; Malaguit River; Panique River; Iloilo River; Luyang River; and Sapangdaku River were assessed to conform with BOD criteria standard of 7.0 mg/L (maximum) (Table 3d).

Moreover, water quality monitoring of the different stations established along the Pasig River System, Manila Bay Area and Laguna Lake was also conducted in CY 2008. The monitoring activity covers measurements of the physical, chemical parameters (i.e. pH, temp, DO, salinity, conductivity secchi depth) and collection of samples for laboratory analyses (EMB Accomplishment Report CY 2008).

For the Pasig River System, assessment results for the period CY 2004-2008 showed that the general water quality of Pasig River system consistently failed to meet the 7mg/L BOD and 5mg/L DO criteria/guidelines set by DENR for Class "C" waters. The most polluted parts of the river system are located downstreams of San Juan River and Marikina River (EMB Accomplishment Report CY 2008).

In the Manila Bay Area, regular monitoring of the quality of coastal waters is based in terms of fecal coliform. The Fecal Coliform (FC) counts in Manila Bay from the period 2000 to 2008 showed exceedances from the maximum limit of 200MPN/100ml in all 14 stations. High values consistently registered in Eastern part of Manila Bay (Navotas Fishport, Luneta Park, Celebrity Beach and Costa Eugenia Beach). On the other hand, the measured FC values in Western part of the Bay (Mattel, Villa Carmen, Villa Leonora and Brgy. Wawa Beaches) indicate lower values in which Mattel Beach Station satisfied the maximum 200 MPN/100ml for Class "SB" waters in 2007 (EMB Accomplishment Report CY 2008).

On the other hand, the BOD and DO levels of Laguna Lake for CY 2008 consistently passed the criteria for Class "C" waters. The result of analysis was consistent with the findings of LLDA. Class "C" waters which is intended for the

propagation and growth of fish and other aquatic resources (EMB Accomplishment Report CY 2008).

On a regional basis, a total of 54 water bodies monitored with complete sample results of BOD and DO levels were recorded from CY 2006-2008. Of this, 31 water bodies have passed the BOD criteria standards in water quality while 9 failed the standards. On the other hand, there were 41 water bodies that conformed with the DO level standards while 4 failed the standards (Table 3d).

Solid Waste

Solid waste problem is seen to be more evident in urban centers, particularly in Metro Manila. These areas are characterized with high population density, high consumption rates and presence of large number of commercial establishments.

Wastes Generation

It is estimated that 0.5 kilograms (kg) is the average wastes generated per person per day in Metro Manila. This is equivalent to 7,000 tons of wastes generated per day (Philippine Environment Monitor 2004).

In CY 2007, the reported solid waste contribution based on a national scale revealed that NCR has the highest waste generation at 2.86 million tons per year, the Southern Tagalog at 1.69 million tons ranked second, followed by the Central Luzon at 1.21 million tons.

Collection and Transport of Solid Wastes

The Local Government Units (LGUs) as mandated in R.A. 9003 or Ecological Solid Waste Management Act of 2000 is responsible for the collection of solid wastes. The collection of municipal solid wastes is done in two ways, either by self-administration or through private contractors.

Based on estimates on a national scale, the average collection efficiency rates in urban areas is about 70%, for rural areas is 40% and for Metro Manila 83% (Philippine Environment Monitor 2004).

Recovery and Recycling

According to an ADB study conducted in 2003 on Waste Analysis and Characterization Survey (WACS), of the total solid waste generated from households, a whooping 95% can still be reused or recycled or turned into compost. The remaining 5% are made up of residuals and special/hazardous waste that no longer have use or not biodegradable.

Existing Solid Wastes Disposal Facilities

As of 2008, there were 3,388 different solid waste disposal facilities, i.e. open dump sites, controlled dump sites, materials recovery facility and sanitary landfills in the Philippines. Of these, 673 were open dump sites, 263 operational controlled dump sites facilities, 2,428 Materials Recovery Facilities (MRFs) and 24 Sanitary Landfills (SLFs) (National Solid Waste Management Commission Accomplishment Report 2008).

For the same period 2008, the National Capital Region (NCR) had the most number of disposal facilities with 458 followed by Region 11 and Region 1 with 449 and 317, respectively. On the other hand, Region 12 had the least number of disposal facilities with 59 (Table 4).

With regard to the type of disposal facilities as of 2008, Region 7 had the most number for both open dumpsites and controlled dumpsites with 119 and 51 respectively. Comparatively, CAR and NCR were recorded with the least number for open dumpsites and controlled dumpsites respectively. For the other facility, NCR had highest number of material recovery facility with 456 followed by Region 11 with 426. On the other hand, three regions have the most number of sanitary landfills, Regions 3 and 7 with 5 each and Region 4-A with 4 (Figure 3, Table 4).

Toxic and Chemical Substances

The importance and benefits of and dependence on most chemicals in our daily existence and healthy survival cannot be denied. However, some of these chemicals may pose potential risk to public health and environment if not managed properly.

As of 2008, there were 46,280 chemicals listed in the Philippine Inventory of Chemicals and Chemical Substances (PICCS). These chemicals are regularly imported, manufactured and used by industrial establishments and related industries in their operations. Among the PICCs list, 48 are considered and selected by the DENR as priority chemicals from which the 5 regulated chemicals i.e., mercury and mercury compounds, cyanide and cyanide compounds, asbestos, ozone depleting

substances and polychlorinated biphenyls, are subject to stricter rules of the Chemical Control Order. In 2008, there were issuances of 447 Small Quantity Importation (SQI) clearance, 239 CCO Importation clearance, 224 CCO Registration clearance and 910 PICCs (Table 5).

Hazardous Waste

To date in 2008, a total of 10,034 hazardous waste generators (HWGs) (8,586 firms; 1,448 hospitals) were registered in the country. The number reflected an increase of 9% from 9,204 HWGs in CY 2007. Out of the total registered HWGs in CY 2008, the National Capital Region had the most number with 2,351 or 23 percent while 1,670 or 17 percent can be found in CALABARZON. On the other hand, Region 4-B had the least number of registered HW generators with 158 or almost 2 percent of the total (Figure 4, Table 6).

Figure 4 - Number of Registered Hazardous Wastes Generators: 2000-2008

Environmental Impact Assessment

The Philippine Environmental Impact Statement System (PEISS) with the general policy issued in 1977 thru PD 1151 and the system established in 1978 thru P.D. 1586 sets the general policy requiring all developmental projects perceived to have significant effects to the environment to acquire an Environmental Compliance Certificate (ECC) prior to its construction and eventual operation.

Environmental Impact Assessment (EIA) is a process that involves evaluating and predicting the likely impacts of a project on the environment in order to eliminate or minimize the perceived consequences it will bring about. A proponent needs to acquire an Environmental Compliance Certificate (ECC) before the project will be implemented. ECC are being classified into Environmentally Critical Project (ECP) and Environmentally Critical Area (ECA). ECP is a project that will most likely have high risk or negative environmental impacts. While ECA is a project that is located in an area which is ecologically, socially, or geologically sensitive.

In 2008, there were only 21 ECPs (Table 7) issued as compared in CY 2000 with 34. On the other hand, a total of 3,618 ECC were issued for ECA, from which Region 3 had the most number with 470 or 13 percent followed by Region 6 with 343 or almost 10 percent of the total (Table 7a).

Adjudication of Pollution Cases

The Pollution Adjudication Board (PAB) is a quasi-judicial body that has the sole jurisdiction over the pollution cases in the country except those under the jurisdiction of the Laguna Lake Development Authority (LLDA). The Board issues orders i.e., Cease and Desist Order (CDO), Temporary Lifting Order (TLO) and Formal Lifting Order (FLO). A CDO is issued to direct the discontinuance of operations in order to stop the discharge/emission of pollutants. However, upon submission of relevant documents and evaluation by the Board, a CDO may be temporarily lifted by the issuance of a TLO. The TLO allows operations at the same time that the pollution control device is being installed or upgraded. Upon completion of the upgrading/installation, samples of the emission/discharge are collected and analyzed in the laboratory to test efficiency of the device. Once efficiency is proven, the computed fines must be settled to effect issuance of a FLO which indicates termination/resolution of the pollution case.

EMB serves as Secretariat to the Pollution Adjudication Board, a quasijudicial agency created under Sec. 19 of E.O. No. 192 for the adjudication of pollution cases.

In 2008, a total of 9 CDOs, 16 TLOs and 10 FLOs were issued. The Region 4-A (CALABARZON) had the most number of pollution cases issued with 37 followed by the National Capital Region and Region 6 with a total of 35 and 22 respectively (Table 8).

Notes:

1) DO - Dissolved Oxygen

BOD - Biochemical Oxygen Demand

- 2) Guideline values for DO : 5.0 mg/L (minimum) BOD : 7.0 mg/L (maximum)
- 3) Data not Available
- 4) Brown print entry are stations with high exceedances in BOD guideline value

Notes:

1) DO - Dissolved Oxygen

BOD - Biochemical Oxygen Demand

2) Guideline values for DO : 5.0 mg/L (minimum)

BOD: 7.0 mg/L (maximum)

3) - Data not Available

4) **Brown print** entry are stations with high exceedances in BOD guideline value

5) Red print entry are stations that conform with DO and BOD guideline values

Section G

Research, Development and Extension Sector

The years spanning 2006 to 2009 was a productive period for the DENR Research Sector that includes the Ecosystems Research and Development Bureau (ERDB) and the various Ecosystems Research and Development Service (ERDS) of the DENR Regional Offices. Notwithstanding the natural calamities, and persistent issues and problems that need to be hurdled, the Sector pursued the general management, supervision and implementation of ENR research and development and extension (RDE) programs and projects in close coordination with stakeholders. The Sector's operations were made possible through its human resources that continued to hone their capabilities through local and international trainings, seminars and workshops on various fields.

The year 2006 was a reckoning point to give the Sector a more focused and coordinated type of Research, development and Extension (RDE) program and project implementation. The following year was the initiation of banner programs of the Sector where projects of similar nature were coordinated by ERDB and implemented by the different ERDS in their areas of jurisdiction. In 2007, a total of two hundred twelve (212) programs/projects were implemented by the Sector including twenty four (24) by the ERDB and one hundred eighty eight (188) by the regional ERDS (Table 1). In 2008, there were one hundred ninety (198) programs/projects implemented by the Sector (33 by ERDB and 165 by ERDS) and in 2009 two hundred fourteen programs/projects were implemented (49 by ERDB and 165 by ERDS).

The forty-nine (49) RDE programs/projects implemented in 2009 include the eleven (11) banner programs and thirty-eight (38) other priority RDE projects. Eighteen (18) of the other priority projects were externally-funded and the rest were ERDB-funded. Among the most significant RDE accomplishments include the provision of technical assistance to the implementation of 23 new vulnerability assessment (VA) projects, thirteen (13) of which have counterpart funds from ERDB and the completion of the evaluation of VA report and integration of project experiences as inputs in the refinement of the VA guidelines.

Among the significant accomplishment of the Sector was the vulnerability assessment of priority watersheds in the Philippines. Table 2 shows the different priority watersheds assessed for different types of vulnerabilities. These include flooding and soil erosion, hazards characteristic of majority of the watersheds assessed, water pollution (mostly in Luzon watersheds), fire, and biodiversity loss. The Table shows that all the watersheds were prone to landslide and soil erosion.

Table 3 shows the carrying capacity (CARCAP) of selected protected areas for ecotourism and Community Based Forestry Management (CBFM) areas as of December 2009. This was for nine (9) CBFM areas, and nineteen protected areas (PA) that include parks, small islands and seascapes. The carrying capacity of CBFM areas was expressed in terms of occupancy or number of families to be accommodated in the areas given certain constraints, while for PAs the unit was visitors/per day.
In support of the reforestation program of the government, the Sector conducted verification and assessment of sources of tree planting materials. Table 4 shows the different species identified as plus trees or good source of planting materials and the specific sites where these species can be located. Except for CAR, NCR, Regions 1, 2, 4A and 12, the different regions had verified and assessed seed sources.

The Sector also conducted advocacy and promotion activities, engaged in enterprise development, and conducted built-in research on Charcoal Briquetting Technology. Trainings for would-be users of the technology were conducted in various areas (Tables 5) and 14 units of equipment were fabricated and distributed to different local government units and other entities (Table 6).

Under the Technology Transfer and Extension activities, the ERDB with the contribution of the ERDS maintained its regular technical and semi-technical publications: Sylvatrop; Canopy International and Research Information Series on Ecosystems (RISE) and information brochures were produced for distribution to readers and subscribers (Table 7). The bureau also took part in several environment-related or DENR-sponsored exhibits (Table 8) to raise public awareness on ENR RDE projects. From these the Sector was able to receive positive feedbacks from the audience. The ERDB also conducted trainings for its staff and clientele to improve their capabilities and to increase awareness in ENR related matters (Table 9).

Section H

Water Resources

Presidential Decree 1067 of 1976 otherwise known as the Water Code of the Philippines is the basic water law governing the ownership, appropriation, utilization, exploitation, development, conservation and protection of water resources. It defines the extent of the rights and obligations of water users and owners including the protection and regulation of such rights. Pursuant to the Code water may be appropriated for the following uses: domestic, municipal, irrigation, power generation, fisheries, livestock raising, industrial, recreational and other purposes. Except for "purely domestic purpose" which is defined as the use of not more than 250 liters/capita/day of water by a single household, a water permit/authority from the National Water Resources Board (NWRB) is required when appropriating water.

As of 2009, the Board already issued 19,940 water permits and allocated water (surface and groundwater) accounting to 192,434 million cubic meter per year (mcm/y) for various purposes stated in the Code (see Table 1). The number of permits issued has increased from 9,190 in 2006 to 19,940 in 2009. Likewise, water allocation has increased from 185,313 mcm/y in 2006 to 192,434 mcm/y in 2009 (Figure 1).

Source: National Water Resources

According to the classification of the National Water Resources Board (NWRB), water use is classified as consumptive and non-consumptive. Among the consumptive water use "Irrigation" remains as the primary user of water and responsible for more than 80% of water that is already allocated (Figure 2). It was followed by industrial use accounting to approximately 10 % then domestic use with around 7 %.

Chapter 2 Laguna de Bay

Laguna de Bay

Lake Water Balance 2005 – 2008

The average annual lake water level ranges from 11-3-11.7 meters. The minimum and maximum level both registered in 2007 at 10.6 meters and 12.5 meters, respectively (Table 1). From year 2000 to 2008, the annual average is 11.4 with highest average in 2009 (maximum level of 13.9) and lowest average in 2004 at 11.1.

Lake Water Volume 2005-2008

Annual average of the lake water volume ranged from 2,995.10 to 3,301.64 MCM with both minimum (4,207.4 MCM) and maximum (2,327.6) volume recorded in 2007 (Table 2). Since 2000, the rate of change in volume had been negative except for the years 2005 and 2007 which recorded a positive change of 580.7 million cubic meter (MCM) and 473.4 MCM, respectively. This corresponds to 18.4 and 15 cubic meter per second, respectively.

Figure 3. Change in Water Balance of Laguna de Bay

Environmental User Fee System

The Discharge Permits (DP) issued have been increasing since 2000 reaching its peak in 2006 but slightly decreasing in 2007 and 2008. The 720 permits in 2008 consisted of permits issued and revalidated as a result of LLDA's issuance of long term permit since 2007. This includes two to three year validity of permits which is revalidated on a yearly basis. The number of industries covered is in the upward trend reaching to about 2,767 firms in 2008 (Table 6).

Figure 4. Number of Industries with Valid Permits

Notices of Violations (NOVs) issued have been fluctuating while cases elevated to public hearing stage have been relatively low in 2006 (69) but drastically increase to about 880% by 2008 (608). The number of Ex-parte Orders and Cease & Desist Orders (CDOs) have been fluctuating since 2000 but generally on downward trend. The signing of agreement binding LLDA to suspend in all jurisdiction the implementation of DENR MC no. 27 (sic. DENR MC no. 24) insofar as it requires fastfood outlets and similar commercial establishments, specifically Quick Service Restaurant (QSR) members to comply with DENR DAO 35 standard; and suspend the issuance of NOVs, Ex-Parte Orders, CDOs and similar orders to QSR members for violation of DAO 35.

The Authority has issued a total of 684 LLDA Clearance from 2006 to 2008 bringing the total number issued to 2765 since year 2000 (Table 9). There was an increasing trend in the issuance of ECC and CNC from 2005-2007. In 15 July 2008 by virtue of DAO 2008-11, the Delegation of Authority to the General Manager of LLDA to grant or deny the issuance of ECC / CNC was recalled by the DENR. Consequently the number of ECC/CNC confirmed by DENR increased while those approved by LLDA decreased in 2008.

Fishery Zoning and Management Program

Aquastructures occupy about 11% of the total lake area while 88-90% of which consists of fishpens and roughly about 10-12 % are fishcages. However, as to number of structures, fishpens are only about 17% of the total number while fishcages are about 84%. Occupied area is shown below:

Fishcage Fishpen

Water Quality of Laguna de Bay (LdB)

The monitoring of Laguna de Bay was conducted on a monthly basis in five stations ; East Bay, West Bay, Central Bay, Northern and Southern Bay. The physicchemical analysis is evaluated based on Class "C" water quality criteria of DENR, Administrative Order No. 34, series of 1990:

Biochemical Oxygen Demand (BOD₅) – all the LdB stations passed the Class "C" water criteria of 7 mg/l. BOD₅ concentration range from 1 mg/L to 4 mg/L for the period 2000 - 2008.

Dissolved Oxygen (DO) – all the lake stations passed the Class "C" water criteria for DO at more than 5 mg/L. The DO concentration ranged from 7.4-9.7 mg/L (station V, 2005) for the period 2000 - 2008.

Chloride – The Class "C" water criteria for chloride is 350 mg/L. In year 2000-2002 and 2007-2008, all the lake stations comply with the Class "C" criteria for chloride. In 2003-2005, all the lake stations exhibited exceedance in chloride concentration except Station VIII (2003).

Nitrate – all the lake stations passed the Class "C" criteria for nitrate, 10 mg/L. Nitrate concentration ranged from 0.0225 mg/L (Stn I, 2001) to 0.2910 mg/L (Stn V, 2006).

Phosphate – The Class "C" water criteria for inorganic phosphate in lake and reservoir is 0.05 mg/L. All the stations failed in 2000-2002 and 2006-2007. In 2003, only Station V failed the inorganic phosphate criteria while in 2004 both Stations II and V failed. In 2005, only station II passed the inorganic phosphate criteria. In 2008, Stations II and IV passed the phosphate criteria.

Total Coliform (3 year geomean) - The annual geomean of total coliform in all stations at the Laguna lake met the Class C water quality criteria of 5000 MPN (100 ml for nine (9) years (2000 to 2008). However, all stations in tributary rivers for Rizal and Laguna exceeded the said criteria.

Transparency - During the period 2000-2008, the highest transparency reading in Laguna Lake was measured in 2003 in all bays. The highest average during the aforementioned year was Stn. IV (Central Bay) at 79 cm; Stn. I (West Bay) was second at 71 cm; Stn. II East Bay (Stn. II) at 70 cm.' Stn. VIII (South Bay) 62 cm. and the least transparent was Stn. V (Northern WB). The lowest transparency reading during the study period was recorded in 2000 at 22 cm. in Stn. V. This could be attributed to the turbid water condition at the time of sampling which in effect affected the light penetration in said area.

Water Quality of Tributary Rivers

The monitoring for the tributary rivers of Laguna was done on a monthly basis. Its water quality is evaluated based on Class "C" water quality criteria on DENR, Administrative Order No. 34, series of 1990.

The water quality monitoring data of 2000-2008 have also been analyzed with respect to indicator of oxygen consuming substances (BOD) and nutrients of the water (nitrates and phosphate). The results of analysis indicate that tributary river stations in Tanay (2001, 2004, and 2006), Morong (2000-2001, 2003, & 2005-2006), and Pangil (2001) with an observation increased in BOD of 15 mg/l annual average failed to conformed with Class "C" water quality criteria while the rest of the stations in 2000-2008 passed the criterion of 7 mg/l BOD (Table 4).

Most of our rivers result in "bad" status for dissolved oxygen (DO). It means that an average for DO in 2000-2008 failed to conform with its allowable limit of 5 mg/l DO. Except for Tanay (2002-2003) and Morong (2002-2004 & 2007) passed its Class "C" criteria (Table 4).

An observation for nutrients in the rivers of annual averages concentrations in 2000-2008, shows that nitrate conformed with the 10 mg/l for Class "C" waters. However, for phosphate having a criteria of 0.4 mg/l concentration failed in Marikina (2003-2008), Bay (2007-2008), Sta. Cruz (2007-2008), Tanay (2000,-2002, & 2004-2005), Bagumbayan (2007-2008) Buli (2007-2008), Mangangate, Tunasan, San Pedro, Cabuyao, San Cristobal, San Juan, Morong, and Cainta from 2000-2008 (Table 4).

2006-2008 BOD Loading of Industry Sector into Laguna de Bay

There are about 2,401 wet industries that are possible dischargers of wastewater into the lake and its tributaries. These firms are registered with the LLDA and are being The 221 industries covered in the first year (1997) implementation of the monitored. Environmental User Fee System (EUFS) have reduced it's BOD loading by 96.97% in 2008 (Table 9). After 12 years, the number of industries covered increased by 986%. The values or reductions in BOD loading fluctuate with a recorded increase in 2006 by 10.02% compared with the previous years (Table 8). Nevertheless, these set of industries have eventually recorded a decrease by 8.03% in 2008 (Table 9, 2005-2008). The fluctuation is due to possible increase in production or expansion resulting to increase in wastewater generation, and increase in number of locators for industrial parks. The increase in BOD concentration of some industries is a result of either failure in terms of BOD concentration or increase in concentration but still within the standard simply to reduce company cost; and corrections done by laboratory on the minimum limit detection for BOD analysis from 0.1 to 2 mg/l starting 2005.

The improvement of value or reduction in loading can be attributed to the efforts of the industries to treat their wastewater by putting up new or improving existing treatment facilities, wastewater recycling and waste minimization activities, conversion from wet to dry process and interconnection to centralized Sewage Treatment Plant/Waste Treatment Facility (STP/WTF) of service provider. Generally, there has been a decrease in BOD loading of industries from the initial year these industries were covered compared with their loading in 2008 (Table 9).

Chapter 3 Gender and Development

Gender and Development

Introduction

Incessant gender mainstreaming in the Department of Environment and Natural Resources (DENR) is being implemented in accordance with Republic Act 7192, directing all government agencies to promote women's advancement and Executive Order No. 348 - Adopting the Philippine Development Plan for Women (PDPW). Recognizing the importance of these policies and in support to E.O. 348 issued a Department Administrative Order (DAO) No. 7 s. of 1995 re: Establishing the GAD Functional Structure in the Department.

Gender mainstreaming emanated as a set of concrete ways to pro-actively promote gender equality. There are two distinct inter-related courses of action that involves in gender mainstreaming. First, is integrating women and their specific concerns and issues in the development process and secondly, incorporating gender analysis in policy and program design. These steps of action are ways of identifying the different interests and needs of males and females to enhance the effectiveness of local and national agencies.

Cognizant to the perspective of gender equality, the DENR has embarked on innovating approaches as part of Environment and Natural Resources programs/projects and other related activities. As a result, the following successful initiatives aim to highlight and draw attention to facts and figures reflecting the male and female participation.

I. Manpower Complement

Taking a glance at 2009 manpower strength of the Department reached a total of 20,539 comprised of 59% male and 41% female (Figure 1a). These included personnel from the Office of the Secretary, Bureaus, Regional Offices and Attached Agencies. In relation to the total workforce, the permanent workforce expectedly has the highest with 18,961 (male - 11,289 and female - 7,672) followed by casual employees with 1,494 (male - 781 and female - 713) and contractuals with the least number of 84 (male - 39 and female - 45) (Table 1).

Figure 1a - Percentage Composition of DENR

Among the bureaus, the Mines and Geosciences Bureau (MGB) had the biggest number of regular employees of 1,113 composed of 652 male and 461 female. This is followed by the Environmental Management Bureau (EMB) with a total of 666 employees broken down to 328 male and 338 female.

At the regional level, Regions 2, 3, 10, 11 and CAR were noted to have a regular workforce of more than one thousand and apparently with male dominated population.

II. Capability Building/Personnel Enhancement Through Trainings/ Scholarship Programs

In an effort to cater the growing needs for an improved public service, the Human Resource Development Service (HRDS) continuously carried out various trainings, scholarship programs, and other staff development programs. Under the DENR Local Scholarship Program there were nine (9) employees who completed their chosen field of specialization composed of five (5) males and four (4) females as of CY 2009. These graduates were holder of Bachelor of Science, Masteral and Doctorate degree (Table 2a). For the same period of review, there were thirty three (33) DENR-Local Scholars with on-going contract comprised of seventeen (17) male and sixteen (16) female (Table 2a).

In order to capacitate the DENR's middle to senior officers in the areas of biodiversity conservation and management, the DENR forged a partnership with the Development Academy of the Philippines and thus, design a program in Master in Public Management Major in Biodiversity Conservation and Management (MPM-BCM). Under the said program produced graduates of twenty one (21) male and nine (9) female in CY 2008 (Table 2a).

Under the Foreign Scholarship Program (FSP), there were two types of grants, the Executive Order 367 (Study Trips) and Executive Order 298 (Non-Study Trips or Meetings/Conferences/Study Tours). For the period CY 2001-2009, both grants under E.O. 367 and E.O. 298 which showed the highest number of scholars were in CY 2004 and CY 2009 (Figure 2, Table 2b).

Figure 2 Number of Grantees under the Foreign Scholarship Program

On statistical aspect, the Research and Statistics Division (RSD), Planning and Policy Service through the HRDS spearheaded the conduct of annual training related to statistics. Said trainings aim to equip the participants with different statistical tools relevant in coming up with an eloquent analysis pertaining particularly on the state of the Environment and Natural Resources. The target participants came from the DENR Central Office, Bureaus, Regional Offices and Attached Agencies who handles workload on statistics in their respective offices. For CY 2009, training courses on Basic Statistical Analysis and Advanced Statistical Analysis Using MS Excel were undertaken with experts from Statistical Research and Training Center (SRTC) as resource persons. The two courses on Basic and Advance Statistical Analysis hive a total of 21 and 29 participants respectively. A notable number of female participants have attended both courses with a total of 37 as compared with male with only 12.

III. Gender Mainstreaming In ENR Programs/Projects/ Activities

A. Land Disposition

In accordance with Republic Act No. 7192 otherwise known as the "Women in Development and Nation Building Act, paved the way for the issuance of DENR Department Administrative Order (DAO) No. 13 s. of 2002 re: Removal of gender bias in the acceptance and processing of Homestead Patent Applications and Other Public Land Applications. Through this Order, women, regardless of civil status, shall enjoy equal rights as men in the filing, acceptance, processing and approval of public land applications. In effect, a number of female were recorded as recipients of public lands. Generally, an increasing number of beneficiaries of disposed lands were recorded from 2002-2008. However, a notable decrease in the number of female recipients were observed in 2005 and 2008 bringing down the total disposed lands into 101,143 and 113,042 respectively. On the other hand, for the same period 2002-2008, the number of male land beneficiaries continues to increase except in 2008 (Table 3).

B. Protected Areas (Pas) Local And Foreign Visitors

Protected areas are one of the sources of additional income for the country. In 2008, a total of 729,386 Filipinos visited the different protected areas managed by the DENR. Filipino men composed of 377,213 or 52 percent of the total visitors, showed more interest with protected areas than Filipino women 352,173 or 48 percent. For the same period, among all regions, the National Capital Region (NCR) recorded the highest number of male and female visitors with 251,508 and 213,968 respectively. The registry

Figure 3a - Number of Protected Areas (PAs) Local Visitors: 2000-2008

Source: Protected Areas and Wildlife Bureau

book of the park further revealed that male visitors congruously dominated female visitors from CY 2002-2008. (Figure 3a, Table 4a).

On the other hand, 24,854 foreigners visited the different protected areas of the country in 2008. Most of them, 6,817 male and 4,319 female preferred Region 7 as the place to visit. Region 4-B came in second with 2,711 male and 8,320 female visitors. An unstable trend in terms of the total number of protected areas foreign visitors showed from CY 2000-2008 wherein the highest and lowest number of visitors was recorded in CY 2008 and 2007 respectively (Figure 3b, Table 4b).

Figure 3b - Number of Protected Areas (PAs) Foreign Visitors: 2000-2008

Source: Protected Areas and Wildlife Bureau

C. Mining Employment

As part of the Self-Monitoring Report (SMR) required by the Mines and Geo-Sciences Bureau (MGB) to selected mining companies as reference to issuance of permit derived the gender data on mining employment. Record showed that the total employment of Large Scale Metallic Mines by company for the years 2006 and 2008, male employment population consistently outnumbered the female population (Table 5a). For the period CY 2006 -2008, the top three companies in terms of total workforce namely: Philex Mining Corporation, Carmen Copper Corporation and Coral Bay Nickel Corporation have recorded high male workforce. Likewise, the Selected Non-Metallic Mining Companies with a total employment of 5,084 in CY 2008 manifested a male dominated workforce with 92% male or 4,681 and 8% female or 403 (Table 5b).

D. Other Gad-Related Activities

Gender mainstreaming penetrated several Gender and Development (GAD) related programs of the Department giving paramount attention on the welfare of its employees. These included skills training (i.e. livelihood training); establishment and maintenance of Daycare Centers in DENR Central Office, some Bureaus and Regional Offices; provision of health services (i.e consultations, laboratory tests, physical fitness program, etc.); and Information Education Campaign/Studies (i.e. Dalaw Turo by PAWB; lecture/orientation on responsible mining and geohazard survey by MGB;

Socio-Economic Survey of the Hunger Mitigation Program by ERDS; Upland Development Program, Bantay Gubat and Soil Conservation and Watershed Management (SCWM) by FMS; and Orientation on Ecological Solid Wastes Management by EMB) among others have been conducted.

IV. Policy Instruments

Efficient implementation of related Gender and Development (GAD) policy instruments yields successful milestone of various GAD programs and projects in the Department. The following GAD related policies support as groundwork in ensuring the perspective of attaining equality among men and women.

A. GAD International/National Legislations

- 1. Philippine 1987 Constitution which declares that "the state recognizes the role of women in nation building and shall promote the fundamental equality before the law of women and men";
- 2. Proclamation No. 224, "Declaring the First Week of March of Every Year as Women's Week and March 8, 1988 and Every Year Thereafter as Women's Rights and International Peace Day." Proclamation No. 227, "Providing for the observance of the Month of March as 'Women's Role in History Month' was also signed on March 17, 1988. Two years after, R.A. 6949, "An Act to Declare March Eight of Every Year as a Working Special Holiday to be known as National Women's Day was signed on April 10, 1990;
- 3. Executive Order 348 of 1989 which provided for the approval and adoption the Philippine Development Plan for Women 1989-1992;
- 4. Republic Act 7192 which was enacted in July 1991 and responsible for the integration of women as full partners of men in the development and nation building;
- 5. Executive Order 273 of 1995 was issued which was responsible for the formulation of the Philippine Plan for Gender Responsive Development for 1995-2025;
- 6. Beijing Platform for Action (BPA) in 1995 which is a major output of the International Women's Conference in Beijing, China. The BPA called for the use of sufficient financial and human resources for undertaking gender-impact analysis; and
- 7. General Appropriations Act (GAA) of the Philippines provides for the allocation of at least 5% of the budget of all government agencies for mainstreaming gender concerns in their respective areas of concern.

B. DENR-GAD Related Policies

- 1. In 1989, DENR created a Technical Working Committee on Women (TWCW) composed of bureaus and 4 regional offices. The Committee was responsible for ensuring that DENRs policies, programs and projects were responsive to the needs and worked for the interest of its women clients, beneficiaries and employees;
- 2. DENR, Administrative Order No. 4, series of 1991 was issued which provided for the awarding of Certificate of Stewardship Contracts to both spouses. The TWCW was reconstituted into the Gender and Development Focal Point;
- 3. In 1995, DENR-GAD was made a key result area, the GAD Focal Point was restructured providing for the implementation of GAD activities in the DENR with the Secretary designated as the Chairperson of the National GAD Executive Committee;
- 4. DENR Department Administrative Order (DAO) No. 7 s. of 1995 re: Establishing the GAD Functional Structure in the Department;
- 5. In1996, Transformation of the focal points into a system enabling members to initiate and pursue specific tasks without necessarily being dependent to the central office. GAD was made part of the Performance Commitment Statement of the DENR Secretary to the President.

Women were made part of the Protected Area Management Board and the initial implementation of the Gender and Development Service Awards. Also, gender concerns were incorporated in small to medium scale forest plantation plans and activities as well as the issuance of the implementing rules and regulations for community-based forest management program.

- 6. DAO 33, s. of 1996 was also issues which outlined the implementing rules and regulations on anti-sexual harassment.
- 7. DAO 37, s. of 1996 was also issued which required the assessment and determination of impacts of projects on women as part of the Environmental Impact Assessment;
- 8. DAO 4 s. of 1997 was issued incorporating gender concerns in large scale forest plantation plans and activities including the issuance of Memo Circular 12 which institutionalized gender parity in Community Resources Management Framework of the Community-Based Forest Management Program.

GAD activities were made part of the key result areas and commitments. The DENR Day Care Center was created and a number of GAD-related projects were conducted.

Glossary of Terms

Forestry

Term	Definition
Agroforesty	Sustainable management of land, which increases their productivity by properly combining agricultural crops with forest crops simultaneously or sequentially over time through the application of management practices which are compatible with the local climate, topography and slope <i>Source: Philippine Forestry Statistics 2007</i>
Alienable and Disposable Lands	Land of the public domain, which has been classified and declared as such and available for disposition. Source: PD 705, Revising PD 389 Otherwise known as the Revised Forestry Code of the Philippines, 1975; Commonwealth Act 141, Public Land Act, 1945
Allowable Cut	Volume of materials, whether of wood or non-wood products, that is authorized to be cut or harvested regularly from a forest. Source: PD 1559, Further amending PD705 or the Revised Forestry Code of the Philippines, 1978
Almaciga Resin	Resinous exudates obtained from almaciga (Agathis philippinensis) Source: Philippine Forestry Statistics 2007
Annual Log Requirement	Volume of log needed to sustain the operations of a wood processing plant at full or attainable capacity for a period of one year. Source: 2002 Philippine Forestry Statistics
Blockboard	A board having a core of blocks, each not exceeding 2.54 cm. (1 inch) in width, connected or glued face to face to form a slab which is glued between two or more outer piles with the direction of the grain of the core block running at right angle to that of the adjacent outer veneers <i>Source: Philippine Forestry Statistics 2007</i>
Certificate of Ancestral Domain Title	Refers to a title formally recognizing the right of possession and ownership of ICCs/IPs over their ancestral domains identified and delineated in accordance with the IPRA Act of 1997 Source: RA No. 8371 or the IPRA Law 1997

Forestry

Term	Definition
Certificate of Ancestral Land Title	Refers to a title formally recognizing the right of ICCs/IPs over their ancestral lands. <i>Source: RA No. 8371 or the IPRA Law1997</i>
Certificate of Stewardship	An agreement entered into by and between the government and individuals/families actually occupying or tilling portions of the forestlands covered by community-based forest management agreement. Source: DAO 2004-29, Revised Rules and Regulations for the Implementation of Executive Order 263 or Community-Based Forest Management Strategy, 2004.
Charcoal	A product obtained from the destructive distillation and/or thermal degradation of wood. <i>Source: Philippine Forestry Statistics 2007</i>
Civil Reservations	Refer to forest land which has been proclaimed by the President for a specific purpose such as townsites, resettlement areas, ancestral lands, etc. <i>Source: Philippine Forestry Statistics 2007</i>
Closed Forest	Formation where trees in various storey and undergrowth cover a high proportion (>40 percent) of the ground and do not have a continuous dense grass layer. They are either managed or unmanaged forests, in advance state of succession and may have been logged over one or more times, having kept their characteristics of forest stands, possibly with modified structure and composition. <i>Source: DAO 2004-29, Revised Rules and Regulations for the Implementation of Executive Order 263 or Community-Based Forest Management Strategy, 2004.</i>
Community-Based Forest Management Agreement	An agreement entered into by and between the government and the local community, represented by people's organization as forest managers, which has a term of twenty five (25) years renewable for another twenty five years. Source: DAO 2004-29, Revised Rules and Regulations for the Implementation of EO 263 or Community-Based Forest Management Strategy, 2004

Forestry

Term	Definition
Contract	An agreement between the Philippine Government represented by the ENR, and an entity or individual, where by the latter agrees to implement an activity or a series of activities required to reforest a denuded portion of the public domain and the former DENR. <i>Source: DENR Memo Circular 1988-11,</i> <i>Implementing Rules and Regulations of</i> <i>Reforestation Contracts, 1998</i>
Critical Watershed	A drainage area of a river system supporting existing and proposed hydroelectric power, irrigation works or existing water facilities needing immediate protection and rehabilitation to minimize erosion and improve water yield. Source: PD 1559, Further Amending PD705, Otherwise known as the Revised Forestry Code of the Philippines, 1978; DAO 1996-40, Revised IRR of RA 7942 Philippine Mining Act of 1995.
Daily Rated Capacity	The maximum volume of output that a mill can produce in one shift of 8 hours based on the actual performance of the machinery/equipment. Sometimes referred to as true rated capacity. <i>Source: 2003 Philippine Forestry Statistics</i>
Deforestation	The conversion of forest to another land use or the long-term reduction of the tree canopy cover below the minimum 10% threshold. Source: FAO, 2001, Global Forest Resource Assessment 2000 Main Report, FAO Forestry Paper No.140, Rome.
Degradation	A decline in the productivity of an area of land or in its ability to support natural ecosystems or types of agriculture. Source: Gilpin, A., 1996, Dictionary of Environment and Sustainable Development England, John Wiley and Sons Ltd.
	Source: Marra,A.A., 1992, Technology of Wood Bonding: Principles and Practice.
Firewood or Fuelwood	Wood intended for use as fuel Source: Philippine Forestry Statistics 2007

Term	Definition
Forest	Land with an area of more than 0.5 hectare and tree crown cover (or equivalent stocking level) of more than 10%. The trees should be able to reach a minimum height of 5meters at maturity in situ. It consists either of closed forest formations where trees of various storeys and undergrowth cover a high proportion of the ground or open formations with a continuous vegetation cover in which tree crown cover exceeds 10%. Young natural stands and all plantations established for forestry purposes, which have yet to reach a crown density of more than10% or tree height of 5 meters are included under forest. Source: FAO 2000, Global Forest Resource Assessment 2000, Rome
Forest Charges	Levies imposed by the government on naturally- growing timber and other forest products cut/harvested by the licensee and from plantations established in compliance with TLA reforestation obligations. The rate of which is provided under Section 70,71 and72 of R.A.7161, otherwise known as the Forest Charges Law. <i>Source: DENR Forest Management Bureau2003.</i> <i>Philippine Forestry Statistics Manila</i>
Forest Cover	Natural and man-made forests, including forest within wetlands and built-up areas. Source: FAO 2000, Global Forest Resource Assessment 2000, Rome
Forest Degradation	Changes within the forest whether natural or human- induced which negatively affect the structure or function of the stand or site, and thereby lower the capacity to supply products and/or services resulting to a degraded forest <i>Source: DENR Forest Management Bureau.</i> <i>Harmonization Project. Land Use Group 2004.</i>
Forest Disturbance	Any relatively discrete event in time that disrupts ecosystem, community, or population structure and changes resources, substrate availability, of the physical environment

Term	Definition
	Source: Helms, J.A. 19 98. The Dictionary of Forestry, Society of American Foresters.
Forestland	Includes public forest, permanent forest or forest reserves, and forest reservations. Source: PD 1559, Further Amending PD705, Otherwise known as the Revised Forestry Code of the Philippines, 1978
Forestland Grazing lease Agreement	A long-term privilege granted by the state to a person to occupy and possess inconsideration of a specified rental and regulation, any forest land of the public domain found suited for grazing purposes, in order to undertake any authorized activity. Source: MAO 1982-50, Regulations Governing the Administration, Management and Disposition of Grazing Lands, Communal Grazing Lands and Forestlands used for Grazing Purposes, 1982.
Forestland Grazing Management	A production sharing agreement between a qualified person, association and/or corporation and the government to develop, manage and utilize grazing lands. Source: DAO 1999-36, Revised Rules and Regulations governing the Administration, Management, Development and Disposition of Forest Lands Used for Grazing Purposes, 1999
Forest Management	The process of planning and implementing practices for stewardship and use of forestland aimed at fulfilling relevant ecological, economic, and social functions of the forest in a sustainable manner. <i>Source: FAO, Global Forest Resources Assessment</i> 2003, Rome
Forest Products	Goods and services derived from the forest such as but not limited to timber, lumber, veneer, plywood, fiberboard, pulp wood, firewood, bark, tree top, resin gum, wood oil, honey, beeswax, nipa, rattan or other forest growth such as grass, shrub and flowering plant, the associated water, fish, game, scenic, historical, and educational.
Forestry	

Term	Definition
	Source: DAO 1987-80, Regulations Governing the Measurement, Assessment and Payment of Forest Charges on Timber and Other Forest Products, 1987
Forest Reservation	Forest land which has been reserved by the President of the Philippines for any specific purpose or purposes. Source: PD 705, Revising PD 389,Otherwise known as the Revised Forestry Code of the Philippines, 1975
Forest Reserve	Land of the public domain which has been a subject of the present system of classification and declared to be needed for forest purposes. Also known as Permanent Forest. Source: PD 1559, Further Amending PD705, Otherwise known as the Revised Forestry Code of the Philippines, 1978.
Forest Resources	Includes soil and all elements found on it, above and below the ground in an area classified as forest land. Source: DAO 2000-65, Guidelines Governing the Creation of Subproject Sites Management Office and its Institutionalization in the Forestry Sector Project Implementation, 2000.
Fuelwood	Wood used as fuel for purposes of cooking, heating or power production. Source: DENR Forest Management Bureau, Harmonization Project, Forest Products Group, 2004
Game Refuge	Refers to a forest land designated for the protection of game animals, birds and fish and closed to hunting and fishing in order that the excess population may flow and restock surrounding areas. <i>Source: Philippine Forestry Statistics 2007</i>
Grazing Land	Portion of the public domain which has been set aside, in view of its topography and vegetation, for the raising of livestock. Source: PD 1559, Further Amending PD705, Otherwise known as the Revised Forestry Code of the Philippines, 1978.

Term	Definition
Integrated Forest Management Agreement	An agreement entered into by the DENR and a qualified person to occupy and possess inconsideration of a specified rental, any forestland of the public domain in order to establish an industrial forest. Source: DAO 1999-53, Regulations Governing the Integrated Forest Management Program, 1999
Integrated Social Forestry	The national program provided for by LOI 1260designed to maximize land productivity and enhance ecological stability, and to improve the socio-economic conditions of forest occupants and communities <i>Source: DAO 1991-04, Revised Regulations governing Integrated Social Forestry Program, 1991</i>
Kaingin	A portion of the forest land, whether occupied or not which is subjected to shifting and/or permanent slash-and-burn cultivation having little or no provision to prevent soil erosion. Source PD 1559, Further amending PD 705, otherwise known as the Revised Forestry Code of the Philippines, 1978
Land	Resources both man-made and natural, found on the surface, below, and above the ground including inland waters and the air therein. Source: Alvarez, H., House Bill No. 170, An Act providing for the National Land Use Code of the Philippines and other Purposes, 1998.
Land Classification	A system for determining land of the public domain into forest land, mineral land, national parks, and agricultural land based on the 1987 Constitution. In current practice, land of the public domain is classified into either forest land or alienable and disposable land. <i>Source: NEDA, 2002, National Framework for</i> <i>Physical Planning.</i>
Land Use	The manner of utilizing the land, including its allocation, development and management.

Forestry	7
----------	---

Term	Definition
	Source: RA 8435, Agricultural Fisheries Modernization Act.1997
Lease	A privilege granted by the state to a person to occupy and possess, in consideration of a specified rental, any forest land of the public domain in order to undertake any authorized activity therein. <i>Source: PD 705, Revising PD 389,Otherwise known</i> <i>as the Revised Forestry Code of the Philippines,</i> 1975
License Agreement	A privilege granted by the state to a person to utilize forest resources within any forest land with the right of possession and occupation thereof to the exclusion of others, except the government, but with the corresponding obligation to develop and protect. <i>Source: PD 705, Revising PD 389,Otherwise known</i> <i>as the Revised Forestry Code of the Philippines,</i> 1975
Log	Any section of the bole, a large branch, or a felled tree after cross cutting with at least 15centimetersin diameter and 1.5 meters in length. Source: DENR Forest Management Bureau, Harmonization Project, Project Expert Group. 2005.
Logging	Synonymous to TIMBER HARVESTING Source: Philippine Official Reference for Forest- Related Terms and Definitions, ITTO P2 222/03 Rev. 1 (F)
Lumber	The product of the saw and planning mill. Not further manufactured other than by sawing, resawing and passing lengthwise through standard planning machine, crosscutting to length, and matching. <i>Source: USDA, Revised 1987 USDA Forest</i> <i>Products Laboratory Wood Handbook: Wood as an</i> <i>engineering material. Agricultural Handbook, p466.</i> <i>Washington, DC</i>
Managed Forest	A forest under a deliberate system of protection, rehabilitation and development which may include utilization of resources, to ensure the sustainable production of desired products and services and the

Forestry

Term	Definition
	conservation of soil, water, wildlife and other resources therein. Source: DAO 1999-53, Regulation Governing the Integrated Forest Management Program 1999
Mangrove Forest	Forested wetland growing along tidal mudflats and along shallow water coastal areas extending in land along rivers, streams and their tributaries where the water is generally brackish and composed mainly of RhizoOpora, Bruguiera, Ceriops, Avicenia, and Aegicera spp. Source: PD 705, Revising PD 389, Otherwise known as the Revised Forestry Code of the Philippines, 1975; Center for International Forestry Research
Military and Naval Reservations	Refers to forest land which has been proclaimed by the President for military purposes, such as Airbase, Campsite, Docks and Harbors, Firing Range, Naval Base, Target Range, Wharves, etc Source: Philippine Forestry Statistics 2007
Mini Sawmill	A sawmill with a daily rated capacity of less than10,000 board feet and with flywheel diameter allowed by existing regulations. Source: DENR Forest Management Bureau, Harmonization Project, Forest Products Group, 2004
Nipa Shingle	Roofing material made from the fronds of nipa palm (<i>Nypa fruticans</i>). Source: Philippine Forestry Statistics 2007
Non-Timber Forest Products	All biological materials and derivatives other than timber, which are extracted from forests for human use. Synonymous to Non-wood forest products. Source: DENR Forest Management Bureau, Harmonization Project, Forest Products Group, 2004
Open Forest	Formations with discontinuous tree layer with coverage of at least 10% and less than 40%. They are either managed or unmanaged forests, in initial state of succession.

Forestry

Term	Definition
	Source: FAO, 2001, Global Forest Resources Assessment, 2000 Main Report, FAO Forestry Paper No. 140, Rome.
Paper and paperboard	Products made from pulps and waste paper plus fillers, size colouring matter and other additives as required which may be machine or hand-made in rolls or sheets where the rolls exceed 15 cm. in width and the sheets have no side less than 36 cm. <i>Source: Philippine Forestry Statistics 2007</i>
Paper Board	A thick, heavy-weight, rigid, single, or multi-ply type of paper traditionally made on multi-cylinder paper machine with and without dual head boxes or multi-former arrangements. <i>Source: Lavigne, J.R. 1993. Pulp and Paper</i> <i>Dictionary</i>
Particle Board	A generic term for board material manufactured from wood particles or other lignocellulosic materials and a synthetic resin consolidated under heat and pressure. Source: DENR Forest Management Bureau,2003, Philippine Forestry Statistics, Manila
Permit	A short-term privilege or authority granted by the State to a person to utilize any limited forest resources or undertake a limited activity within any forest land without any right of occupation and possession therein. Source: PD 1559, Further Amending PD 705,otherwise known as the Revised Forestry Code of the Philippines, 1978
Plantation Forest	Forest stands established by planting or seeding in the process of a forestation or reforestation. Source: FAO, 2001, Global Forest Resources Assessment, 2000 Main Report, FAO Forestry Paper No. 140, Rome.
Plywood	A panel consisting of an assembly of veneer sheets bonded together with the direction of the grain in alternate plies generally at right angles.

Forestry	<i>r</i>
----------	----------

Term	Definition
	Source: ITTO, 2004, Joint Forestry Sector Questionnaire.
Poles and Piles	Logs for use as electric post, pier piling, railroad ties, sleepers and the like. Source: Philippine Forestry Statistics 2007
Processing Plant	Any mechanical set-up, device, machine or combinations of machines used for the conversion of logs and other forest raw materials into fiberboard, pulp, paper or other finished wood products <i>Source: P.D. 1559</i>
Pulpwood	Any wood cut or prepared primarily for the production of wood pulp. Source: Philippine Forestry Statistics 2007
Rattan	A group of cane-like climbing plant species belonging to genus Calamus, Daemonorops, Korthalsia, and Plectocomia for the family Palmaegenerally found on most tropical rainforest. It may come in split or unsplit forms which are used primarily in furniture and households fixtures. <i>Source: Philippine Forestry Statistics Yearbook</i>
Rattan, Split	The outer hard portion of rattan cane used in various types of baskets, hats, fish traps, mats and in great quantities for tying together posts, beams, rafters, flooring and roofing of lightwood materials and bamboo houses. Source: Philippine Forestry Statistics Yearbook
Rattan, Unsplit	Rattan canes in its raw form cut into shorter lengths usually 4 meters in length, for ease of handling and transporting; same as unsplit rattan. <i>Source: Philippine Forestry Statistics Yearbook</i>
Reforestation	The establishment of forest plantations on temporarily unstocked lands that are considered as forest. Also called as artificial regeneration. <i>Source: Philippine Forestry Statistics 2007</i>

Forestry

Term	Definition
Sawlog	A log considered suitable in size and quality for producing sawn timber Source: Philippine Forestry Statistics Yearbook
Sawmill	A wood processing plant used for the conversion of logs/timber into lumber which includes band or circular resaws with carriage that are operated as independents units for resawing/ripping of lumber, slabs and other wood wastes into desired dimensions and forms are not accessories to the head rig. <i>Source: Philippine Official Reference for Forest-Related Terms and Definitions ITTO P2 222/03 Rev. 1 (F)</i>
Sawmill, Mini	A stationary sawmill equipped with a log carriage or a portable mill equipped with rails where the head rig moves for sawing, with a daily rated capacity of less than 10,000 board feet.
	Source: MAO 50, series of 1986
Sawmill, Regular	A sawmill equipped with a log carriage or with rails on which the head ring runs with a daily rated capacity of at least 10,000 board feet. <i>Source: MAO 50, series of 1986</i>
Socialized Industrial Forest Management Agreement	Refers to an agreement entered into by and between a natural or juridical to develop, utilize and manage a small tract of forestland, consistent with the principle of Sustainable Development.
	Source: DENR DAO No. 24, series of 1996
Timber	The major product of the forest, the standing tree Source: Philippine Forestry Statistics Yearbook
Timber License Agreement	A long term license executed by and between the Secretary of Environment and Natural Resources on behalf of the government and the grantee for the harvesting and removal from the public forest of timber, and in appropriate cases also of other forest products. <i>Source: Philippine Forestry Statistics 2007</i>

Forestry

Term	Definition
Timberland	Includes public forest, permanent forest or forest reserves and forest reservations. Source: Philippine Forestry Statistics 2007
Tree Farm	Any small forest land or tract of land purposely planted with tree crops <i>Source: Philippine Forestry Statistics 2007</i>
Veneer	A thin layer or sheet of wood produced by sawing, peeling or slicing Source: Philippine Forestry Statistics Yearbook
Watershed	A land area drained by a stream or fixed body of water and its tributaries having a common outlet for surface run-off. <i>Source: PD 1559</i>
Watershed, forest reserve	Any watershed that has been delimited and proclaimed by the President of the Philippines as such to be used exclusively for watershed purposes. Such as watershed forest reserves are withdrawn from entry, sale or other disposition, and no portion thereof shall be excluded except with the concurrence of Congress. <i>Source: Philippine Forestry Statistics 2007</i>
Wilderness Area	Refers to land of public domain which have been reserved as such by law to preserve its natural conditions, maintain its hydrologic quality and restrict public use in the interest of national welfare and security, <i>Source: Philippine Forestry Statistics 2007</i>

Term	Definition
Abandoned	Wild plants and animals intentionally left by keeper/owner (human) giving up responsibility for care and maintenance or left by "biological" parents (for animals). Source: DAO No. 2000-46 Compilation of Policy Issuances CY 2000-2002
Alienable and Disposable Lands	Refer to public lands classified as agricultural and therefore alienable and disposable prior to the passage of RA No. 8991, provided that ancestral domains are not considered to be alienable and disposable as they are considered never to have been public. <i>Source: Republic Act No. 8991; DAO No. 2000-83</i> <i>Compilation of Policy Issuances CY 2000-2002</i>
Biodiversity	Refer to the variety and variability among all living organisms and the ecological complexes in which they occur. Source: Republic Act Nos. 9125, 9147, 9154;DAO No. 2000-13 Compilation of Policy Issuances CY 2000-2002
Buffer Zones	Are identified areas outside the boundaries of and immediately adjacent to the Reserve that need special development and control in order to avoid or minimize harm to the Reserve. <i>Source: Republic Act No. 9106 Compilation of Policy</i> <i>Issuances CY 2000-2002</i>
Convention on International Trade in Endangered Species of Flora & Fauna (CITES)	It is an international treaty ratified by the Philippine Government purposely to regulate, control and prohibit the trade of wildlife. Source: DAO No. 2002-19 Compilation of Policy Issuances CY 2000-2002
Conservation Dependent	Taxa which are the focus of a continuing taxon-specific or habitat-specific conservation programme targeted towards the taxon in question, the cessation of which would result in the taxon qualifying for one of the threatened categories within a period of five (5) years.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 232

Term	Definition
Critically Endangered	A taxon that is facing an extremely high risk of extinction in the wild in the immediate future.
	Source: Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002
Data Deficient	A taxon where there is inadequate information to make a direct, or indirect, assessment of its risk of extinction based on its distribution and/or population status.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 232
Endemic	Native to and restricted to a specific geographic area. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 232
Endangered Species	Shall refer to species or subspecies whose populations are in danger of extinction and whose survival is unlikely if the causal factors continue operating. <i>Source: Republic Act Nos. 9125, 9147 Compilation of</i> <i>Policy Issuances CY 2000-2002</i>
Export Permit	Refers to a permit authorizing an individual to bring out wildlife from the Philippines to any other country. <i>Source: Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002</i>
Extinct	A taxon where there is no reasonable doubt that its last individual has died.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 232
Game Refuge and Bird Sanctuary	Refers to a forest land designated for the protection of game animals and fish, and closed to hunting and fishing in order that the excess population may flow and restock surrounding areas.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Habitat	A place or environment where a species or subspecies naturally occur or has naturally established its population.
	Source: Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002

Bi	odi	ver	sitv
~	0.01		5105

Term	Definition
Indeterminate	Species and subspecies of wildlife whose populations are suspected of belonging to either one of the E, V, and R categories but for which insufficient information is currently available to determine definite status.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Integrated Protected Area Fund (IPAF)	Trust fund established for purposes of financing activities of protected areas. IPAF may be derived from income generated from the operation of the Park, such as taxes from the sale of flora and fauna, proceed from lease of multiple-use areas, and contributions from industries and facilities. <i>Source: DAO No. 2002-02 Compilation of Policy</i> <i>Issuances, CY 2000-2002</i>
Least Concern	Taxa which do not qualify for Conservation Dependent or Near Threatened. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Lower Risk	A taxon when evaluated does not satisfy the criteria for any of the categories Critically Endangered, Endangered and Vulnerable.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Migrant	Species that winter in the Philippines on a seasonal basis or those that cross transboundaries on several states. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Marine Park/Reserve	Any off-shore area inhabited by rare, unique species of marine flora and fauna.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
National Integrated Protected Areas System (NIPAS)	The classification and administration of all designated protected areas to maintain essential ecological processes and life-support systems, to preserve genetic diversity, to ensure sustainable use of resources found therein, and to

Term	Definition
	maintain their natural conditions to the greatest extent possible. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
National Park	Refers to a forest reservation essentially of natural wilderness character which has been withdrawn from settlement or occupancy and set aside as such exclusively to preserve the scenery, the natural and historic objects and the wild animals or plants therein, and to provide enjoyment of these features in such a manner as we leave them unimpaired for future generations. <i>Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233</i>
Natural Biotic Area/Reserve	An area set aside to follow the way of life societies living in harmony with the environment to adopt to modern technology at their pace. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233
Natural Monument/Landmark	A relatively small area focused on protection of small features to protect or reserve nationally significant natural features on account of their special interest or unique characteristics. Source: 2002 Statistics on Philippine Protected and
	Wildlife Resources, p. 233
Natural Park	Refer to a relatively large area not materially altered by human activity where extractive resource use and large- scale infrastructure projects are not allowed in its strict protection zones and maintained to protect outstanding natural and scenic areas of national or international significance for educational, scientific and recreational use. Source: Republic Act No. 9125 Compilation of Policy Issuances CY 2000-2002
Near Threatened	Taxa which do not qualify for Conservation Dependent, but which are close to qualifying for Vulnerable.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233

Term	Definition
Permit	A short term privilege or authority granted by the state to a person to utilize any limited forest resources or undertaken a limited activity within forest land without any right if occupation and possession therein. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 234
Protected Area Management Board (PAMB)	A multi-sectoral body created in each protected area vested with powers to decide the allocations for budget, approve proposals for funding and decide matters relating to planning, peripheral protection and general administration of the protected area in accordance with the general management strategy, among others.
	Source: DAO No. 2002-02 Compilation of Policy Issuances CY 2000-2002
Protected Areas	Refers to identified portions of land and water set aside by reason of their unique physical and biological significance, managed to enhance biological diversity and protected against destructive human exploitation. <i>Source: 2002 Statistics on Philippine Protected and</i> <i>Wildlife Resources, p. 234</i>
Protected Landscape/Seascape	Areas of national significance which are characterized by the harmonious interaction of man and land while providing opportunities for public enjoyment through recreation and tourism within the normal lifestyle and economic activity. <i>Source: 2002 Statistics on Philippine Protected and</i> <i>Wildlife Resources, p. 234</i>
Protected Species	Refer to any plant or animal declared protected under Philippine laws. These shall include all species listed under the Convention on International Trade of Endangered Species (CITES) and all its Annexes, the Bonn Convention on Migratory Animals, those specified under the redlist categories of the International Conservation of Nature (IUCN), or any plant or animal which the PAMB may deem necessary for conservation and preservation in the Mt. Kanla-on Natural Park. <i>Source: Republic Act No. 9154 Compilation of Policy</i> <i>Issuances CY 2000-2002</i>

Term	Definition
Rare	Species and subspecies of wildlife found only one particular or only in a few areas in very highly specialized habitat types but occur only in very small numbers and are therefore, seldom met with, even within their preferred habitat types. Their populations are not at present endangered or vulnerable but are at risk.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 234
Resident	Breed or are suspected of breeding in the Philippines normally living there throughout the year.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 234
Resource Reserve	An extensive and relatively isolated and uninhabited area normally with difficult access designated as such to protect natural resources of the area for future use and prevent or contain development activities that could affect the resources pending the establishment of objectives which are based upon appropriate knowledge and planning. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 234
Transport Permit	Permit issued authorizing an individual to bring wildlife from one place to another within the territorial jurisdiction of the Philippines. <i>Sources: 2002 Statistics on Philippine Protected and</i> <i>Wildlife Resources, p. 234;</i>
	Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002
Threatened Species	 A general term to denote species or subspecies considered as critically endangered, endangered, vulnerable or other accepted categories of wildlife whose population is at risk of extinction. Source: 1) Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002; 2) 2002 Statistics on Philippine Protected and Wildlife Resources p. 234

Term	Definition
Vulnerable Species	Refers to a species or subspecies that is not Critically Endangered or Endangered but is under threat from adverse factors throughout their range and likely to move to the endangered category in the near future. <i>Source: 1) Republic Act No. 9147 Compilation of Policy</i> <i>Issuances CY 2000-2002;</i>
	2) 2002 Statistics on Philippine Protected and Wildlife Resources p. 234
Watershed Forest Reserve	It is a land area drained by a stream or fixed body of water and its tributaries having a common outlet for a surface run-off. <i>Source: 2002 Statistics on Philippine Protected and</i> <i>Wildlife Resources p. 234</i>
Wetlands	Areas of (marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static, flowing, fresh, brackish or salt, including areas of marine water), the depth of which at low tide does not exceed six meters. <i>Source: 1999 Statistics on Philippine Protected and</i> <i>Wildlife Resources p. 239</i>
Wilderness Area	Refers to land of public domain which has been reserved as such by law to preserve its natural conditions, maintain its hydrologic quality and restrict public use in the interest of national welfare and security. This include foreshore protection forests, mossy forests and mangrove forests essentially needed for foreshore protection and maintenance of estuarine and marine life including critical watershed reservations and special forest which are the exclusive habitat of rare and endangered Philippine Flora and Fauna.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources p. 234
Wildlife	Means wild form of varieties of flora and fauna, in all developmental stages, including those which are in captivity or are being bred or propagated. Source: 1) DAO No. 2000-66 Compilation of Policy Issuances CY 2000-2002
	2) 2002 Statistics on Philippine Protected and Wildlife Resources, p. 235

Term	Definition
Wildlife Collector's Permit	Means a permit to take or collect from the wild certain species and quantities of wildlife for commercial purposes. Sources: Republic Act No. 9147; DAO No. 2000-19 Compilation of Policy Issuances CY 2000-2002
Wildlife Farm /Culture Permit	Means a permit to develop, operate, and maintain a wildlife breeding farm for conservation, trade and/or scientific purposes. Source: Republic Act No. 9147 Compilation of Policy Issuances CY 2000-2002
Wildlife Export	The conveyance of wildlife and its by products from any place within the territorial jurisdiction of the Philippines to another country. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 235
Wildlife Sanctuary	Comprises an area which assures the natural conditions necessary to protect nationally significant species, group of species, biotic communities or physical features of the environment where these may require specific human manipulation for their perpetuation.
	Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 235

Coastal And Marine

Term	Definition
Coastal Area	Is a band of dry land and adjacent ocean space (water and submerged land) in which terrestrial processes and uses directly affect oceanic processes and uses, and vice versa; its geographic extent may include areas within a landmark limit of one kilometer from the shoreline at high water tide to include mangrove, swamps, brackish water ponds, nipa swamps, estuarine rivers, sandy beaches and other areas within a seaward limit of 200 meters isobath to include coral reefs, algal flats, seagrass beds and other soft-bottom areas (as defined by RA 8550)
	Source: DAO No. 2000-83 Compilation of Policy Issuances CY 2000-83
Coral Reef	A natural aggregation of coral skeleton, with or without living coral polyps, occurring in inter-tidal and sub- tidal marine water. Source: R.A. 8550 Fisheries Code of the Philippines
Coral Triangle	Is a geographical term referring to the tropical marine waters of Indonesia, Malaysia, Papua New Guinea, Philippines, Solomon Islands and Timor-Lester that contains at least 500 species of reef building corals in each region. This region encompasses portions of two bio-geographic regions: the Indonesian-Philippines Region and the Far Southwestern Pacific Region. The Coral Triangle is considered to be the global epicenter of marine biodiversity, and a global priority for conservation. <i>Source: Wikipedia</i>
Foreshore	A string of land margining a body of water, the part of seashore between the law-water line usually at the sea ward margin of a low tide terrace and the upper limit of wave wash at high tide usually marked by a beach scarp or berm. Source: DAO No. 2000-83 Compilation of Policy Issuances CY 2000-2002
Mangrove	A term applied to the type of forest occurring on flats along the sea coast, extending along streams where the water is brackish. Source: 2002 Statistics on Philippine Protected and Wildlife Resources, p. 233

Coastal And Marine

Term	Definition
Nearshore	Part of the offshore but immediately next to the foreshore. Source: DAO No. 2000-83 Compilation of Policy Issuances CY 2000-2002
Seagrass Bed	Areas of salt tolerants that occur in shallow nearshore waters, estuaries, lagoons and adjacent to coral reefs. They hold sediment in place, support a rich detrital community and provide food and habitat for many important nearshore species. <i>Source: Castro and Juber, 1997</i>

Term	Definition
Contingent Liability and Rehabilitation Fund	An environmental guarantee fund mechanism to ensure just and timely compensation for damages and progressive and sustainable rehabilitation for any adverse effect a mining operation may cause
Exploration Permit	Refers to the permit granted to the qualified persons to conduct exploration activities in specified areas.
Financial or Technical Assistance Agreement (FTAA)	Means a contract involving financial or technical assistance for large scale exploration, development and utilization of mineral resources.
Geologic Hazard or Geohazard	Refer to natural and man induced geological processes that have potential to cause destruction and pose threat or risks to man's life and property.
Industrial Sand And Gravel Permit (IP)	Refers to the permit granted to the qualified person for the extraction and utilization of sand and gravel and other unconsolidated materials with use of mechanical processing covering an area not more than five (5) hectares or a term of five (5) years but not to exceed a total term of twenty-five (25) years.
Large-Scale Mining	Mining activities which uses mechanized equipment, plant facilities explosives for development, production and marketing of minerals and of minimum lot coverage of five (5) hectares.
Local Government Unit	The concerned Barangay, Municipality, City or Province
Metallic Mineral	Means a mineral having a brilliant appearance, quite opaque to light, usually gives a black or very dark streak and where a metallic element/component can be extracted/utilized for profit.
Mill Tailings	Means materials whether solid, liquid or both segregated from the ores during concentration/ milling operations which has no present economic value to the generator of the same

Term	Definition
Mine Waste	Means soil and./or rock materials from the surface or underground mining operations with no present economic value to the generator of the same.
Mine Waste and	The basic fees that shall accrue to the MWT Reserve
Tailing Fund	Funds shall be P $0.05/MT$ of mine waste produced and P $0.10/MT$ of mill tailings generated from mining operations.
Minerals	Refers to all naturally occurring in organic substances in solid, liquid, gas or any intermediate state excluding energy coal, petroleum, natural gas, radioactive materials and geothermal energy.
Mineral Agreement	Means a contract between the government and a Contract, involving Mineral Product Sharing Agreement and Joint Venture Agreement, or Co- Production Agreement.
Mining Permits	Include Exploration, Quarry, Sand and Gravel (Commercial, Industrial and Exclusive), Gratuitous (Government or Private), Guano, Gemstone Gathering, and Small- Scale.
Mineral Processing	The milling, beneficiation, leaching, smelting, cyanidation, calcination or upgrading of ores, minerals, rocks, mill tailings, mine waste, and/or other metallurgical by-products or by similar means to convert the same into martketable products.
Mineral Processing Permit	Refers to the permit granted to a qualified person for milling, beneficiation, leaching, smelting, cyanidation calcinations or upgrading of ore(s)/mineral(s) rocks/mill tailings waste/other metallurgical by products or by similar means to convert the same into a marketable product.

Term	Definition
Mineral Production Sharing Agreement (MPSA)	An agreement wherein the government grants the contractor the exclusive) right to conduct mining operations within the contract area and shares in the production whether in kind or in value as owner of the minerals therein.
Mineral Products	Means materials derived from mineral ores/rocks and prepared into marketable state by metallurgical process which include, but not limited to milling, beneficiation, leaching, smelting, cyanidation calcinations and other similar process.
Mineral Reservation	Area set aside and established when national interest so requires, such as when there is a need to preserve strategic raw materials for Industries critical to national development or certain minerals for scientific, cultural or ecological value.
Mineral Resources	Any concentration of ores, minerals and/or rocks with proven or potential economic value.
Non-Metallic Mineral	Refers to mineral usually having a dull luster, generally light-colored, transmit light, usually gives either colorless or colored streak and where a non-metallic element/component can be extracted/utilized for a profit.
Ore	Naturally occurring substance or materials from which a mineral or An element can be mined and/or processed for profit.
Producing Mine	Any mine presently involved in the development and utilization of mineral deposit/s / Any mine involved in the utilization of mineral resources.
Quarrying	The process of extracting, removing and disposing quarry resources found on or underneath the surface of public or private land.

Term	Definition
Quarry Permit (QP)	Refers to the permit granted to the qualified person for the extraction and utilization of quarry resources.
Royalty	The payment contractor/permit holders/lessees shall pay to the bureau which shall not be less than five percent (5%) of the market value of the gross output of the minerals/mineral products extracted or produced from the Mineral Reservation exclusive of all other taxes.
Small-Scale Mining	Mining activities which rely heavily on manual labor using simple implements and methods and do not use explosives or heavy mining equipments with maximum lot area coverage of five (5) hectares. These permits are issued by the Local Government Unit.

Note: All the definition of terms are taken from the 'Revised Implementing Rules and Regulations of Republic Act No. 7942', Otherwise Known as the "Philippine Mining Act of 1995"

Lands

Term	Definition
Administratively Titled Lands	Refers to the lands of the public domain of a certain city/ municipality that has been titled through the issuance of patents and deeds of conveyances by the DENR. Indicate the corresponding no. of lots/area in hectares. Source: Lands Management Bureau
Approved Cadastral Survey	Refers to the completely approved cadastral survey, usually covers an entire city/municipality Source: Geodetic Surveys Division, LMB
Areas Turned Over to Other Agencies by Virtue of Proclamations	Refers to the parcel/s of the classified A & D lands that were transferred to other government agencies, branches, instrumentalities for public or quasi-public purposes through a proclamation of the President of the Philippines. <i>Source: Lands Management Bureau</i>
Cadastral Survey	Comprises all surveys of extensive areas consisting of several lots for cadastral proceedings, agricultural development, or other purposes pursuant to the cadastral laws.
	-Involves the survey of whole municipality (or an extensive portion) for identifying and delineating the individual claims of all land owners and claimants which will be the basis of the issuance of titles or patents. It also includes the delineation of the boundaries of the various political units (barangay, municipality, province) as well as the boundaries between the forested area and the alienable and disposable lands. <i>Source: Manual on Land Surveys, LMB</i>
Classified A & D Lands in Hectares	Refers to the lands of the public domain of a certain city/municipality which have been declared as not needed for forest purposes and place under the management and jurisdiction of the DENR in accordance with the existing laws and regulations. Indicate the corresponding area in hectares.
Comprehensive Agrarian Reform Program	To promote social justice and industrialization, providing the mechanism for its implementation, and for other purposes.

Lands	5
-------	---

Term	Definition
	Source: RA 6657 or "Comprehensive Agrarian Reform Law (CARL) of 1998
Fake or Spurious Certificate of Title	Is one that was not a result of any recognized proceeding for titling. Hence, it was not processed regularly or there were defects affecting validity or its authenticity. It confers no right and affords no protection to the holder of the certificate and can be considered as a mere scrap of paper. <i>Source: Manual for Settlement and Lands Dispute</i>
Foreshore Areas	The part of the shore which is alternately covered and uncovered by the ebb and flow of the tide. Source: DAO 2004-04 re: Revised Rules and Regulations Governing the Administration and Management of Foreshore Lands.
In-Progress Cadastral Survey	Refers to the cadastral survey wherein fieldwork operation is on-going or the survey returns were submitted to the LMS and the IVAS is in process. operation is on-going or the survey returns were submitted to the LMS for Inspection, Verification and Approval of Survey (IVAS) activity. <i>Source: Geodetic Surveys Division, LMB</i>
Judicially Titled Lands	Refers to the lands of the public domain of a certain city/municipality that has been titled through court proceedings. Indicate the corresponding no. of lots/area in hectares. <i>Source: Lands Management Bureau</i>
Land Claim	An assertion of an individual to a right against a public land applicant $\sum_{n=1}^{\infty} M_{n} = \sum_{n=1}^{\infty} M_{n} = \sum_{n=1}^{\infty}$
Land Conflict	Arises when two or more persons apply for the same parcel of land. Source: Manual on Settlement of Land Disputes

Lands

Term	Definition
Land Title	Refers to the legal right to own a property and the certificate of title is the document which confers such right of ownership to an individual association or corporation. Source: Manual on Land Disposition, LMB
Non-Agricultural	Refers to the parcel/s of the classified A & D lands that were reserved for public or quasi-public uses like roads, plazas, right of ways, etc. This also includes those areas that were not transferred to other agencies by specific laws and/or proclamations which the DENR has ceased its jurisdiction. <i>Source: Lands Management Bureau</i>
Patent	Is an official document confirming absolute ownership of an applicant to a parcel of land.
	Source: Manual for Land Disposition, LMB
Partially Surveyed	a) When there is lot survey of extensive of portion of municipality under the project of the government such as public land subdivision survey, group settlement survey and townsite survey.
	b) When created municipality of which a portion is from a cadastrally surveyed municipality and the other portion is from unsurveyed municipality.
	c) When there are barangays which were already surveyed and approved before the cadastral project was abandoned or the cadastral survey approved does not constitute the above municipality such as prewars surveys. Source: Manual on Land Survey, LMB
Patrimonial Property of the State	Is the property it owns but which is not devoted to public use, public service or the development of the national wealth. It is wealth owned by the state in its private as distinguished from its public capacity.
	Source: Lands Management Bureau
PRS '92	Refers to Philippine Reference System of 1992, which aims to replace the old geodetic network of control points by adopting a common reference system of all surveys and maps in the country using

Lands

Term	Definition
	Geographic Positioning System (GPS), a satellite- based technology. Source: Lands Management Bureau and National Mapping and Resource Information Authority (NAMRIA)
Remaining Untitled Lands	Refers to the remaining areas of the classified A & D lands under the DENR management and jurisdiction expressed in number of hectares of a certain city/municipality less those titled lands and lands that were transferred to other agencies and reserved for specific public and quasi-public purposes by existing laws and regulations. <i>Source: Lands Management Bureau</i>
Unsurveyed	 a) When there is no lot survey yet of the whole municipality under the project of the government b) When the cadastral survey returns of the result of final lot survey were not submitted for verification and approval, when the contractor abandoned the project. c) When the approved cadastral mapping and cadastral sketching are both yet converted into numerical cadastre. d) When the cadastral survey project was not implemented. Source: Manual on Land Survey, LMB

Term	Definition
Ambient Air Quality	Means the general amount of pollution present in abroad area; and refers to the atmosphere's average purity as distinguished from discharge measurements taken at the source of pollution. <i>Source: The Philippine Clean Air Act of 1999 or</i> <i>R.A.</i> 8749
Ambient levels of standard	Refers to the allowance of maximum levels of selected pollutants in a water body of the surrounding air, 'with an adequate margin of safety, that will protect public health and the environment'. <i>Source: DAO No. 11, s. of 1994</i>
Area Sources	Relatively large areas of specific activities that generate significant amounts of air pollutants. These include busy roads and hubs, construction sites, aircraft operations, forest fires or the burning of wastes, residential sites, and similar dispersed sources. <i>Source: National Air Quality Status Report, 2002</i>
Biochemical Oxygen Demand (BOD)	A measure of the approximate quantity of dissolved oxygen that will be required by bacteria to stabilize organic matter in wastewater or surface water. It is a semi-quantitative measure of the wastewater organics that are oxidizable by bacteria. It is also a standard test in assessing wastewater strength. <i>Source: DAO No. 35, s. of 1990; DAO No. 51 s. of</i> <i>1998</i>
Chemical Control Order (CCO)	Prohibits, limits and regulates the use, manufacture, import, export, transport, processing, storage, possession and wholesale of priority chemicals. <i>Source: DAO No. 36, s. of 2004</i>
Chemical Oxygen Demand (COD)	A measure of the approximate quantity of dissolved oxygen equivalent of the organic matter content of a sample that is susceptible to oxidation by a strong chemical oxidant. For samples from a specific source, COD can be related empirically to BOD, organic carbon, or organic matter. <i>Source: DAO No. 51, s. of 1998</i>
Chlorofluorocarbons (CFCs)	A family of chemicals that contain chlorine, fluorine and carbon, used as refrigerants, aerosol propellants, cleaning solvents and in the manufacture of foam.

Environment

Term	Definition
	Source: DAO No. 8, s. of 2004
Cease and Desist Order (CDO)	A decision handed down by the Pollution Adjudication Board (PAB), the DENR Regional Executive Director (RED), or the Laguna Lake Development Authority (LLDA), directing the discontinuance of the emission or discharge which constitutes an immediate threat to life, public health, safety or welfare, or to plant or animal life, or exceeds the allowable DENR standard, or the temporary suspension or cessation of operations of the establishment or firm generating such pollutants. <i>Source: DAO No. 4, s. of 1997</i>
	Refers to an Order issued by the Pollution Adjudication Board requiring respondents to refrain from further operating their establishment, machines, equipment or other facilities generating or causing pollution. Source: DAO No. 30, s. of 1992
Controlled dump	Shall refer to a disposal site at which solid waste is deposited in accordance with the minimum prescribed standards of site operation. <i>Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003</i>
Cyanide	Means any substance containing the cyanide ion, CN, as found in metallic cyanide and hydrogen cyanide. Source: DAO No. 39, s. of 1997
Dumping	Means any unauthorized or illegal disposal into any body of water or land of wastes or toxic or hazardous material: provided that it does not mean a release of effluent coming from commercial, industrial and domestic sources which are within the effluent standards. <i>Source: Ecological Solid Waste Management Act of</i> 2000 or R. A. No. 9003
Ecological Solid Waste Management	Shall refer to the systematic administration of activities which provide for segregation of source, segregated transportation, storage, transfer, processing, treatment, and disposal of solid waste and all other waste management activities which do

En	vira	nm	ent

Term	Definition
	not harm the environment. Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003
Effluent	Means any wastewater, partially or completely treated, or any waste liquid flowing out of mining operations, wastewater treatment plants or tailings disposal system. <i>Source: DAO No. 40 s. of 1996</i>
Effluent standard	Means any legal restriction or limitation or quantities, rates, and/or concentrations or any combination thereof, of physical, chemical or biological parameters of effluent which a person or point source is allowed to discharge into a body of water or land. <i>Source: DAO No. 10 s. of 2005</i>
Emission	Means any air contaminant, pollutant, gas stream or unwanted sound from a known source which is passed into the atmosphere. <i>Source: The Philippine Clean Air Act of 1999 or</i> <i>R.A. 8749</i>
Environmentally Critical Area (ECA)	 Areas prone to volcanic activities (refers to all areas identified as such by Philippine Institute of Volcanology and Seismology (PHIVOLCS) Areas located along fault lines or within fault zones (refers to all areas identified as such by Philippine Institute of Volcanology and Seismology (PHIVOLCS) Drought-prone areas (refers to all areas identified as such by the Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA) <i>Source: DAO No. 30 s. of 2003</i>
Environmental Clearance Certificate (ECC)	The document issued by the Department certifying that based on the representations of the proponent and the preparers, as reviewed and validated by the Environmental Impact Assessment Review Committee (EIARC), the proposed project or undertaking will not cause a significant negative environmental impact; that the proponent has compiled with all the requirements of the EIS System and that the proponent is committed to implement its

Term	Definition
	approved Environmental Management Plan in the Environmental Impact Statement or mitigation measures in the Initial Environmental Examination. <i>Source: DAO No. 37 s. of 1997</i>
Environmentally Critical Projects (ECPs)	Four main categories of ECPs are (1) heavy industries; (2) resource extractive industries; (3) infrastructure projects and (4) golf course projects. <i>Source: DAO No. 30 s. of 2003</i>
Hazardous waste	Are substances that are without any safe commercial, industrial, agricultural or economic usage and area shipped, transported or brought from the country of origin for dumping or disposal into or in transit through any part of the territory of the Philippines. <i>Source: DAO No. 29 s. of 1992</i>
	As substances that are without any safe commercial, industrial, agricultural or economic usage and are shipped, transported or brought from the country of origin for dumping or disposal into or in transit through any part of the territory of the Philippines. Shall also be refer to by-products, side products, process residues, spent reaction media, contaminated plant or equipment or other substances from manufacturing operations, and as consumer discards of manufacture products. <i>Source: Toxic Substances and Hazardous and</i> <i>Nuclear Waste Control Act of 1990 or R. A. 6969</i>
	Are substances which present either: 1) Short-term acute hazards such as acute toxicity by ingestion, inhalation or skin absorption, corrosivity or other skin or eye contact hazard of the risk of fire or explosion; 2) Long-term environmental hazards – including chronic toxicity upon repeated exposure, carcinogenicity (which may in some case result from acute exposure but with a long latent period), resistance to detoxification process such as biodegradation, the potential to pollute underground or surface waters, or aesthetically objectionable properties such as offensive odors.
	Substances that are without any safe commercial, industrial, agricultural or economic usage and are shipped, transported or brought from the country of

Term	Definition
	origin for dumping or disposal into or in transit through any part of the territory of the Philippines. by-products, side –products, process residues, spent reaction media, contaminated plant or equipment or other substances from manufacturing operations and as consumer discards of manufactured products which present unreasonable risk and/or injury to health and safety and to the environment <i>Source DAO No. 36 s. of 2004</i>
Materials Recovery Facility (MRF)	Includes a solid waste transfer station or sorting station, drop-off center, a composing facility, and a recycling facility. Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003
Mobile Source	Means any vehicle propelled by or through combustion of carbon-based or other fuel constructed and operated principally for the conveyance of persons or the transportation of property or goods. <i>Source: The Philippine Clean Air Act of 1999 or</i> <i>R.A. 8749</i>
Pollutant	 Shall refer to any substance, whether solid, liquid, gaseous or radioactive, which directly or indirectly: alters the quality of any segment of the receiving water body so as to affect or tend to affect adversely any beneficial use thereof; is hazardous or potentially hazardous to health imparts objectionable odor, temperature change, or physical, chemical or biological change to any segment of the water body; or; is in access of the allowable limits or concentrations, or quality standards specified, or in contravention of the condition, limitation or restriction prescribed in this Act <i>Source: The Philippine Clean Air Act of 1999 or R.A. 8749</i>
Pollution	Means any alteration of the physical, chemical and/or biological properties of any water, air and/or and resource of the Philippines, or any discharge thereto of any liquid, gaseous or solid waste, or any production of unnecessary noise, or any emission of objectionable odor, as will or likely to create or to render such water, air and/or land resources harmful,

Term	Definition
	detrimental and injurious to public health, safety or welfare, or which will adversely affect their utilization for domestic, industrial, agricultural, recreational or other legitimate purposes. <i>Source: DAO No. 29 s. of 1992</i>
	Refers to any alteration of the physical, chemical and/or biological properties of any water, air and/or land resources of the Philippines; or any discharge thereto of any liquid, gaseous or solid wastes, or any production of unnecessary noise or any emission of objectionable odor, as will or is likely to create or to render such water, air and land resources harmful, detrimental or injurious to public health, safety or welfare, or which will adversely effect their utilization for domestic, commercial, industrial, agricultural, recreational or other legitimate purposes. <i>Source: DAO No. 40 s. of 1996</i>
Sanitary landfill	Shall refer to a waste disposal site designed, constructed, operated and maintained in a manner that exerts engineering control over significant potential environmental impacts arising from the development and operation of the facility. <i>Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003</i>
Solid Waste	Shall refer to all discarded household, commercial waste, non-hazardous institutional and industrial waste, street sweepings, construction debris, agricultural waste, and other non-hazardous/non-toxic solid waste. Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003
Solid Waste Management	Shall refer to the discipline associated with the control of generation, storage, collection, transfer and transport, processing and disposal of slid wastes in a manner that is in accord with the best principles of public health, economics, engineering, conservation, aesthetics and other environmental considerations, and that is also responsive to public attitudes. <i>Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003</i>

Term	Definition
Solid Waste Management Facility	Shall refer to any resource recovery system or component thereof; any system, program, or facility for resource conservation; any facility for the collection, source separation, storage, transportation, transfer, processing, treatment, or disposal of solid waste. <i>Source: Ecological Solid Waste Management Act of</i> 2000 or R. A. No. 9003
Stationary Source	Means any building or immobile structure, facility or installation, which emits or may emit any air pollutant. Source: The Philippine Clean Air Act of 1999 or R.A. 8749
TSD (Treatment, Storage and Disposal Facilities)	Facilities where hazardous wastes are stored, treated, recycled, reprocessed, or disposed of. Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003
TSP (Total Suspended Particulates)	Are small or liquid particles suspended in air. Major sources of TSP are diesel vehicles and coal-burning power plants. Dust is also a major source of TSP especially during the dry months. Dust can come from unpaved roads and construction activities. <i>Source: National Air Quality Status Report, 2003- 2004</i>
Waste Generator	Means a person (natural or judicial) who generates or produces hazardous wastes, through any commercial, industrial, or trade activities. <i>Source: Ecological Solid Waste Management Act of</i> 2000 or R. A. No. 9003
Waste Transporter	Means a person (natural or judicial) who is licensed to transport hazardous waste. Source: Ecological Solid Waste Management Act of 2000 or R. A. No. 9003
Wastewater	Means waste in liquid state containing pollutants. Source: The Philippine Clean Water Act of or R. A. 9275

Term	Definition
Term Water body	Definition Means both natural and man made bodies of fresh, brackish, and saline waters, and includes but is not limited to aquifers, groundwater, springs, creeks, streams, rivers, ponds, lagoons, water reservoirs, lakes, bays, estuarine, coastal and marine waters. Water bodies do not refer to those constructed, developed and used purposely as water treatment facilities and/or water storage for recycling and re- use which are integral to process industry or manufacturing. <i>Source: Philippine Clean Water Act of 2004 or R. A.</i>
	9275

Water Resources

Term	Definition
Groundwater	Subsurface water that occurs beneath a water table in soils and rocks, or in geological formations Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Surface Water	All water which is open to the atmosphere and subject to surface run-off Source: National Statistical Coordination Board Resolution No. 17. Series of 2009
Use of Water for Domestic Purposes	The utilization of water directly drawn from a source by household for drinking, washing, bathing, cooking, watering of gardens or animals and other domestic uses Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Fisheries	Utilization of water for the propagation and culture of fish as a commercial enterprise or any other aquaculture ventures Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Industrial Purposes	The utilization of water in factories, industrial plants and mines including the use of water as an ingredient of a finished product <i>Source: National Statistical Coordination Board</i> <i>Resolution No. 17, Series of 2009</i>
Use of Water for Irrigation	The utilization of water for producing agricultural crops Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Livestock Raising	Utilization of water for large herds or flocks of animals raised as a commercial enterprise Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Municipal Purposes	The utilization of water for supplying the water requirements of a community, whether by piped or bulk distribution for domestic use, direct consumption, the drawer or abstractor of which being the national government, its subsidiary agencies, local government units, private persons, cooperatives or corporations

Water Resources

Term	Definition
	Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Power Generation	Use of water for producing electrical or mechanical power
	Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Use of Water for Recreational Purposes	Utilization of water for swimming pools, bathhouses, boating, water skiing, golf courses and other similar facilities in resorts and other places of recreation <i>Source: National Statistical Coordination Board</i> <i>Resolution No. 17, Series of 2009</i>
Water Production	Water produced from any source, e.g., wells, springs, surface water, etc., that is fed into the water supply system for distribution
	Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Water Quality	The characteristics of water which define its use in terms of physical, chemical, biological, bacteriological or radiological characteristics by which the acceptability of water is evaluated <i>Source: National Statistical Coordination Board</i> <i>Resolution No. 17, Series of 2009</i>
Water Resources	Water available, or capable of being made available, for use in sufficient quantity and quality at a location and over a period of time appropriate for an identifiable demand <i>Source: National Statistical Coordination Board</i>
	Resolution No. 17, Series of 2009
(WSP)	An entity operating and maintaining a waterworks system Source: National Statistical Coordination Board Resolution No. 17, Series of 2009
Water Use	Water intake of industries and households for production and consumption activities. Water Use is the sum of water use within the economy and water use from the environment. Water use may be for the following purposes <i>Source: National Statistical Coordination Board Resolution No. 17. Series of 2009</i>
Laguna De Bay

Term	Definition
Fishcage	Any aquaculture structure not exceeding one hectare and is existing within the fishcage belt. Source: Laguna Lake Development Authority
Shoreland	Also known as the buffer zone, is that part of the lake bed along the lakeshore lying at elevation 12.5 meters and below and alternately submerged or exposed by the normal annual rising and lowering of the lake levels. Datum elevation is a point 10.0 meters below Mean Lower Low Water (MLLW). This is a linear strip of open space designed to separate incompatible elements or uses, or to control pollution/nuisance and or identifying and defining development areas or zones. <i>Source: Laguna Lake Development Authority</i>

Gender And Development

Term	Definition
Gender	Refers to the socially differentiated roles, characteristics and expectations attributed by culture to women and men. It is created, produced, reproduced and maintained by social institutions. It is a set of characteristics that identifies the social behavior of women and men and the relationships between them. Gender roles and attributes are not natural nor biologically given. <i>Source: The Rationale Behind Mainstreaming, National Commission on the Role of Filipino Women, 2001</i>
Gender Bias/Issues	The preference for an individual or group on account of their gender. Source: Trainor's Manual Gender Sensitivity Training for Cooperators, National Confederation of Cooperatives, 1995
Gender and Development	A development perspective that recognizes the legitimacy of gender legitimacy of gender equality as a fundamental value that should be reflected in development choices. It promotes a positive bias for women since they are more generally excluded or disadvantaged in relation to social and economic resources and decision-making. It recognizes that gender equality does not exist and there is an imbalance in the status of women and men. Source: The Rationale Behind Mainstreaming, National Commission on the Role of Filipino Women, 2001
Gender Equality	Means that women have a fair share of the benefits, as well as the responsibilities of society; they received equal treatment before the law, equal access to resources, social services and education; and equal pay for work of equal value. Gender equality is a goal for women that requires specific indicators in order that programs, policies and projects implemented do not leave women worse off than men. <i>Source: Trainor's Manual Gender Sensitivity Training</i> <i>for Cooperators, National Confederation of</i> <i>Cooperatives, 1995</i>

Gender And Development

Term	Definition
Social Division of Labor	The belief and practice of discrimination against women on the basis of assumed biological and psychological inferiority; the system and practice of discriminating against a person on the grounds of sex; refers to unfair prejudice against women, the stereotyping of women, the defining of women in regard to their sexual availability and attractiveness to men, and all the conscious or unconscious assumptions that cause women to be treated as not fully human, while men are identified as the norm. Source: Trainor's Manual Gender Sensitivity Training for Cooperators, National Confederation of Cooperatives, 1995
Sex	A natural distinguishing variable based on biological characteristics of being a women or man. It refers to physical attributes pertaining to a person's body contours, features genitals, hormones, genes, chromosomes and reproductive organs. Sex differences between women and men are natural. <i>Source: The Rationale Behind Mainstreaming National</i>
Women in Development and Nation Building Act	Commission on the Role of Filipino Women, 2001 An Act promoting the integration of women as full and equal partners of men in development and nation building or R.A. No, 7192 and for other purposes. The State recognizes the role of women in nation building and shall ensure the fundamental equality before the law of women and men. The State shall provide rights and opportunities equal to that of men.
	Source: Trainor's Manual Gender Sensitivity Training for Cooperators, National Confederation of Cooperatives, 1995

Acronyms and Abbreviations

Forestry

Acronyms	Description
AAC	Annual Allowable Cut
ALR	Annual Log Requirement
ARMM	Autonomous Region of Muslim Mindanao
CADT	Certificate of Ancestral Domain Title
CALT	Certificate of Ancestral Land Title
CAR	Cordillera Administrative Region
CBFMA	Community Based Forest Management Agreement
CIF	Cost Insurance Freight
CV	Certificate of Verification
cu.m.	Cubic Meter
DAO	Department Administrative Order
DENR	Department of Environment and Natural Resources
DRC	Daily Rated Capacity
FLAg	Forest Land Use Agreement
FLAgT	Forest Land Use Agreement for Tourism Purposes
FLGLA	Forest Land Grazing Lease Agreement
FLMA	Forest Land Management Agreement
FLUP	Forest Land Use Plan
FMB	Forest Management Bureau
FOB	Free on Board
GRBS	Game Refuge and Bird Sanctuaries
На	Hectare
IFMA	Industrial Forest Management Agreement
IPR	Individual Property Rights
ISF	Integrated Social Forestry
ITPLA	Industrial Tree Plantation Lease Agreement
Κ	Kilo
Lm	Lineal Meter
LGU	Local Government Unit
NA	No Data
NCR	National Capital Region
NIS	National Irrigation System
No.	Number
PD	Presidential Decree
PFDA	Private Forest Development Agreement
PLTP	Private Land Timber Plantation
РТС	Permit to Cut
PTLA	Pulpwood Timber License Agreement
SCP	Special Cutting Permit
SIFMA	Socialized Industrial Forest Management Agreement
SLUP	Special Land Use Permit
SMF	Self-Monitoring Form

Acronyms	Description
SP	Special Permit
t	Ton
TF	Tree Farm
TLA	Timber License Agreement
TFLA	Tree Farm Lease Agreement
WA	Wilderness Area
Php	Philippine Peso
(-)	None
m3	Cubic Meter

Biodiversity

Acronyms	Description
A & D	Alienable and Disposable Lands
ADB	Asian Development Bank
BZ	Buffer Zones
CBD	Convention on Biological Diversity
CITES	Convention on International Trade in Endangered
	Species of Flora and Fauna
СМСР	CITES Measurement and Coordination Program
CD	Conservation Dependent
CR	Critically Endangered
CWR	Certificate of Wildlife Registration
DD	Data Deficient
E	Endemic
EN	Endangered Species
EX	Extinct
GP	Gratuitous Permit
GRBS	Game Refuge and Bird Sanctuary
Ι	Indeterminate
IPAF	Integrated Protected Area Fund
LC	Least Concern
LGU	Local Government Unit
LR	Lower Risk
LTP	Local Transport Permit
М	Migrant
MP/R	Marine Park/Reserve
NIPAS	National Integrated Protected Areas System
NP	National Park
NT	Near Threatened
OGA	Other Government Agency
PA	Protected Areas
PAMB	Protected Area Management Board
